Store Templates Guide

Give your whole store a professional, industry-specific look in one click — without losing a word of your own content. How to pick a template, preview it, preview it at desktop or phone width, apply it as a draft, review it, publish it, undo it, and fine-tune it afterwards; what your customers see; and how to test the whole feature before you go live.

Version 1.1 · updated 15 October 2026

For Merchants, Store Teams & Release Testing

Covers choosing a template · the ten industry templates · previewing at desktop or mobile width · sample products · applying to drafts · the draft banner · Publish all · Discard vs Undo · History (store templates) · Advanced custom CSS · what customers see · rules and who can do what · plans (open to every plan) · a full end-to-end test checklist with expected results · current limitations · troubleshooting · screen index · flowcharts · glossary.

Glossary

Quick Start — Restyle Your Store in 10 Minutes

1. Open the Store Editor (`/store-editor/<page>` in the admin panel) and click the **Templates** tile in the left-hand module rail. A **Store templates** gallery opens.
2. Find the card for your industry. Click **Preview**. A window titled **Preview:** opens over the gallery and shows the template with its own labelled sample products. Use **Desktop** and **Mobile** to switch the width, then **Apply template** in the window if you like it, or **Close**. (Preview is disabled until a storefront URL is configured for the store.)
3. Happy? Click **Apply template** on the card (or in the preview window). A dialog titled **Apply store template** explains what will happen. If it shows an **Add sample products** switch or a **Create category menus** switch, set them as you want (Part 4). Click **Apply to drafts**.
4. A banner titled **Store template draft** appears: “Continue editing any page. Your live store stays unchanged until Publish all.” Browse your pages and adjust anything you like.
5. Click **Preview store** on the banner to see the whole storefront with the draft applied.
6. Click **Publish all** on the banner. A review dialog titled **Publish all pages** lists every affected page and the store theme. Click **Publish all** to confirm.
7. Your store is live in the new look. To go back, open **History**, the **Store templates** tab, and use **Undo store template live**.

The Store templates gallery open from the Templates tile, all eight cards visible

This screenshot was taken when there were eight templates. The gallery now has ten (Part 3). Screenshot pending UAT capture.

> Your own logo, store name, navigation links and products are kept. A template changes the design, not your catalog. Nothing goes live until step 6.

Part 1 — What Store Templates Are

A **store template** is a complete, industry-specific look for your whole storefront: homepage, the header and footer, colours and fonts, and the standard pages around them (login, sign-up, about, contact, wishlist, profile, order pages and more).

In plain terms

- **The template owns the design. You own the content.** Applying a template restyles every page it covers, including pages you have customised before. Your own text, images, menus and products stay. Where you have your own items (for example, a list of menu entries), your item count and order are kept.
- **The template owns the header and footer look.** In both the preview and Apply, the template's header and footer styling (layout, colours, fonts, spacing, custom CSS) wins. The only things kept from your store in the header and footer are your **logo**, your **store name** and your **navigation links**.
- **A blank or starter store takes the template's content.** If a homepage section still holds the platform's untouched starter text or image (for example the starter hero "Elevate Your Lifestyle" with a **Shop Now** button and no image), the template's own text and image replace it. Anything you actually wrote or uploaded is kept.
- **Preview shows sample products; Apply keeps your catalog.** The preview always shows the template's curated sample products, labelled as samples. Applying never replaces your real products. You can choose to add the template's sample products as well (Part 4); by default they are added only to a store with no products.
- **Applying is safe.** It first takes a full snapshot of your store, then writes the new look into **drafts** only. Your live store does not change until you click **Publish all**.
- **You can walk it back.** Before publishing, **Discard** throws the draft away. After publishing, **Undo store template live** restores the snapshot.
- **Open to every plan.** There is no plan gating on templates.

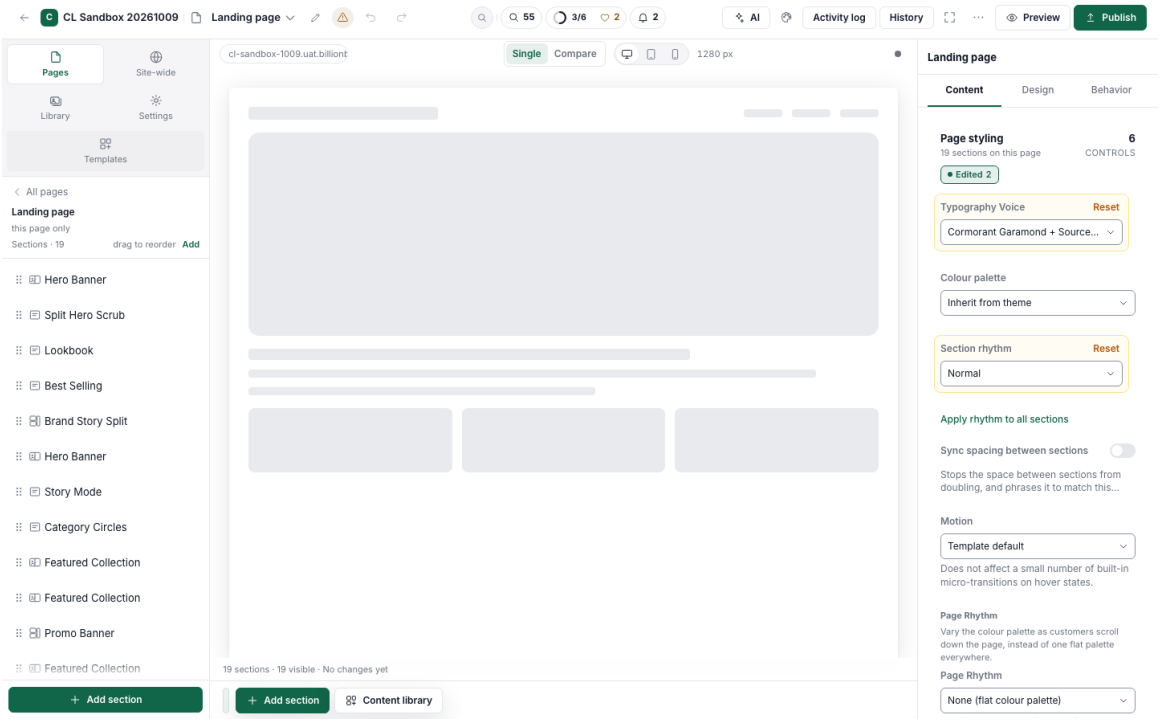

What a template covers: the homepage, the header and footer, the theme (colours, fonts, type pairing) and a set of standard pages. The exact pages differ slightly per template — see Part 3 and Part 11.

What it does not cover: blog pages, search results and collection pages are not templated. Category pages follow the product-listing page look. Search keeps its existing layout.

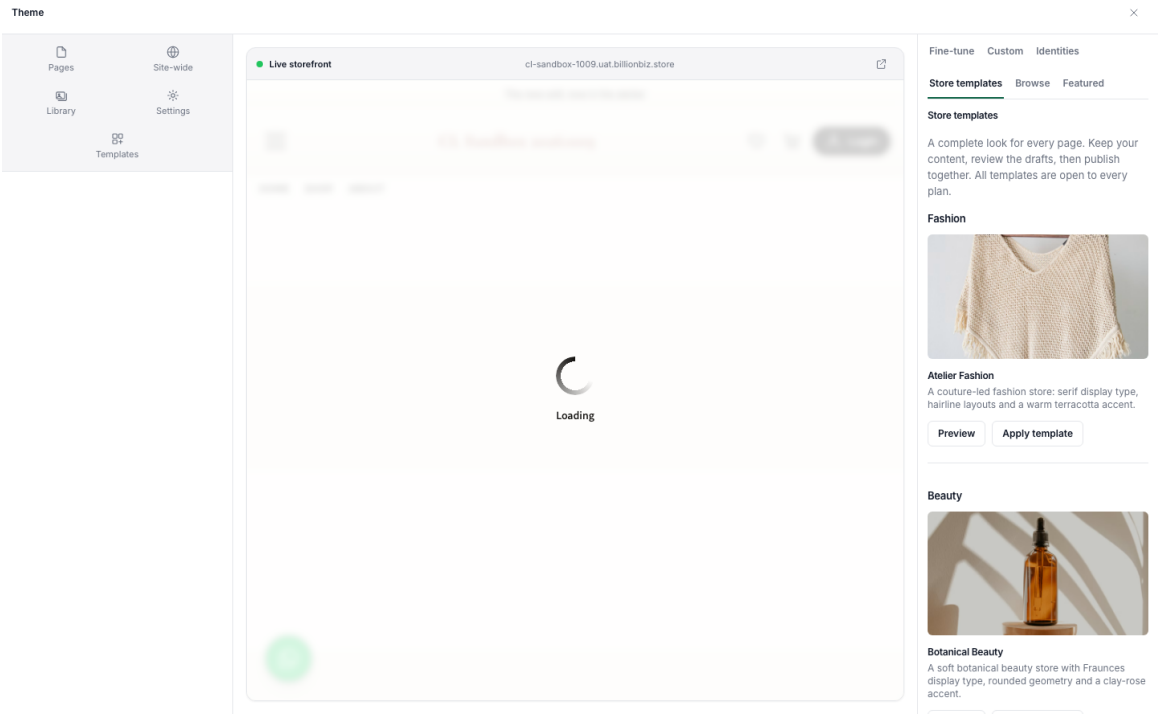

Part 2 — Finding Store Templates in the Editor

There are four ways in. All of them lead to the same gallery.

Where	What you click	Notes
Left module rail of the Store Editor	**Templates** tile	Opens the gallery panel.
Top bar of the Store Editor	**Theme** button, then the **Store templates** tab	The Theme hub tabs are: Fine-tune, Custom, Identities, Store templates, Browse, Featured.
First-run picker	Opens automatically in a new store editor	Dialog with tabs **Store templates** and **Landing page layouts**; has **Skip for now**, **Back** and **Close**.
Setup checklist	The step **Choose a store template**	Opens the gallery.

Store Editor with the Templates tile in the left rail highlighted

Theme hub open with the Store templates tab selected

The first-run picker. When a store has no template yet, the editor can open the picker for you. If you click **Skip for now**, it remembers your choice on that browser and does not pop up again; you can still open it any time from the Templates tile. You can also open it explicitly by adding `?gallery=true` to the editor address.

Getting to the Store Editor from the admin menu. In the admin sidebar, open **Online Store** and click **Landing Page Editor** (in the newer sidebar layout, the **Landing page** item in the storefront group). On stores that run the new Store Editor, that item opens the editor at `/store-editor/LANDING`; the **Templates** tile is then in the left rail. (Sidebar items verified in the admin panel source; the click-through on a live store is still to be confirmed in the UAT walk.)

The gallery

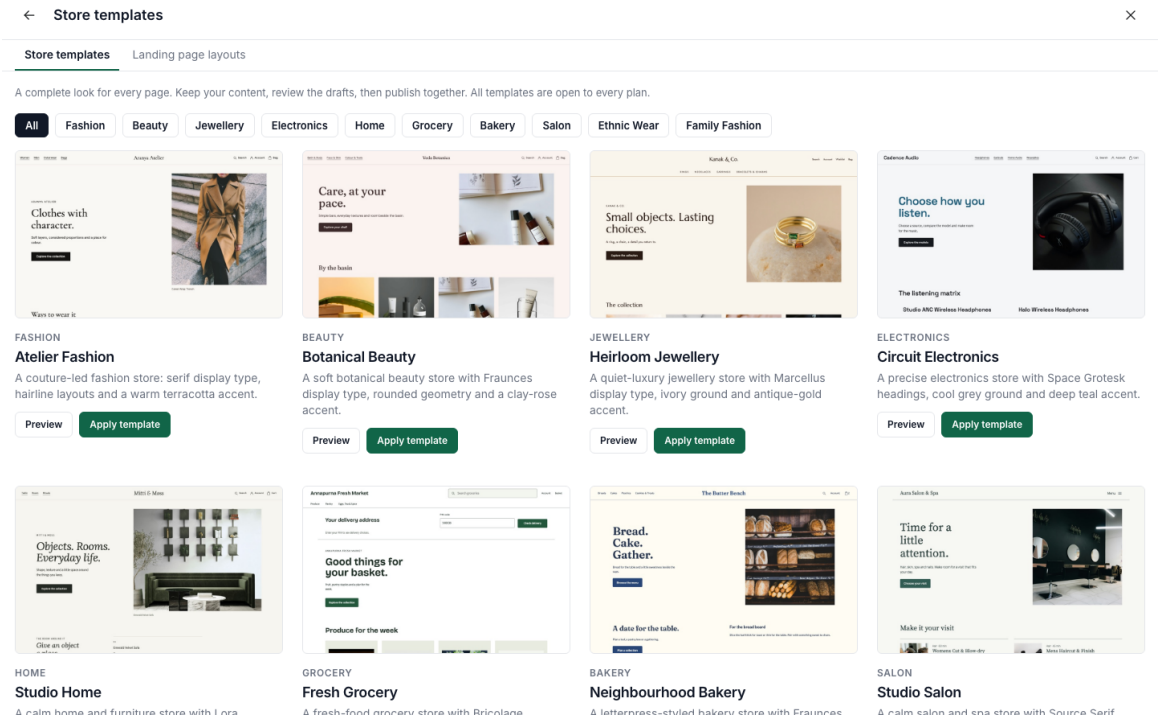

Title **Store templates**, with the line: “A complete look for every page. Keep your content, review the drafts, then publish together. All templates are open to every plan.”

Cards are grouped under an industry heading. Each card shows a thumbnail, the template name, a short description and two buttons:

- **Preview** — opens the preview window over the gallery (Part 4). The button is greyed out until a storefront URL is configured for the store.
- **Apply template** — opens the apply dialog.

In the narrow Templates panel (and the Theme hub tab) the cards are grouped under an industry heading. In the wide first-run picker all cards sit in one grid, the industry is written above each card name, and a row of industry buttons (**All**, then one per industry) filters the grid. Industries appear in a fixed order: Fashion, Beauty, Jewellery, Electronics, Home, Grocery, Bakery, Salon, then Ethnic Wear and Family Fashion. If a template needs a newer storefront than your store runs, the card says “Needs a storefront upgrade before applying.” and cannot be applied until the store is upgraded. The same message carries an **Upgrade your storefront** link.

Other gallery messages: “Store templates could not be loaded.” (with a retry), “No store templates have been added yet.” (empty), and “Your current store template draft could not be loaded. Reload its state before applying.”

Gallery panel with cards, Preview and Apply template buttons visible

Screenshot pending UAT capture: the gallery with all ten cards, including Saanjh Ethnic Wear and Aadhya Family Fashion. Screenshot pending UAT capture — A card showing “Needs a storefront upgrade before applying.” (only if reproducible)

Part 3 — The Ten Templates

The gallery offers ten templates. Names, industries and descriptions below are exactly what the cards show (they come from the template catalogue, not from this guide).

#	Template	Industry on the card	What the card says
1	Atelier Fashion	Fashion	A couture-led fashion store: serif display type, hairline layouts and a warm terracotta accent.
2	Heirloom Jewellery	Jewellery	A quiet-luxury jewellery store with Marcellus display type, ivory ground and antique-gold accent.
3	Botanical Beauty	Beauty	A soft botanical beauty store with Fraunces display type, rounded geometry and a clay-rose accent.
4	Fresh Grocery	Grocery	A fresh-food grocery store with Bricolage Grotesque headings, white ground and deep green accent.
5	Studio Home	Home	A calm home and furniture store with Lora headings, linen ground and moss-green accent.
6	Neighbourhood Bakery	Bakery	A letterpress-styled bakery store with Fraunces headings, cream ground and ink-blue accent.
7	Circuit Electronics	Electronics	A precise electronics store with Space Grotesk headings,

#	Template	Industry on the card	What the card says
			cool grey ground and deep teal accent.
8	Studio Salon	Salon	A calm salon and spa store with Source Serif headings, sage accent and appointment-first layout.
9	Saanjh Ethnic Wear	Ethnic Wear	An ethnic-wear store: brown and beige, a serif display face, a festive sale ticker and a video-led Best Selling rail.
10	Aadhya Family Fashion	Family Fashion	A family fashion and home textiles store: sarees, men, women, girls and handloom linen, with a ticker of promises and a hero with live headline text.

Template 10 is a copy of a real store's structure. Aadhya Family Fashion reproduces the section order, layout and palette of an existing live fashion store, using stock photography (22 images). Its homepage has twelve sections: a hero with the headline "Festive wear for the whole family", a ticker of promises, "Explore Our Collections" category circles, "Our Signature Saree Collection", a "Best Selling" grid, "Trending Now", a why-shop-with-us block, testimonials, promo tiles, an FAQ, and a Lookbook section that is switched off. Some sections show on phones only or on desktop only, like the store it copies. Its theme is white ground, near-black text and a green accent, with a DM Serif Display heading font. Its product list and cart use the standard look of the platform rather than the copied store's (the copied store's filtered-list and single-page-cart styles were not accepted by the template checker).

Template 9, Saanjh Ethnic Wear, has a brown-and-beige theme (page background cream, brown text, copper accent), Playfair Display headings with Inter body text, a hero carousel opening on "THE FESTIVE EDIT", a "Shop by Collection" row, a "Best Selling" rail and a sale ticker (marquee).

Screenshot pending UAT capture — Saanjh Ethnic Wear homepage Screenshot pending UAT capture.

Screenshot pending UAT capture — Aadhya Family Fashion homepage Screenshot pending UAT capture.

What every template includes

As currently seeded, every one of the ten templates carries the same 21 pages: the homepage, header and footer, theme, and these pages: not-found, login, sign-up, forgot password, email verification, about us, contact us, toaster, consent, maintenance, wishlist, profile, order confirmation, thank-you, order detail, order tracking, order listing, **plus the product page, product list, cart and checkout**. (Earlier versions of this guide listed some shop pages as missing for some templates. The current template catalogue includes all four shop pages in all ten templates; if you see a shop page that does not take the template look, report it as a bug.)

Not templated at all, in any template: blog pages, search results and collection pages. Category pages follow the product-list (PLP) look. No template includes a booking page.

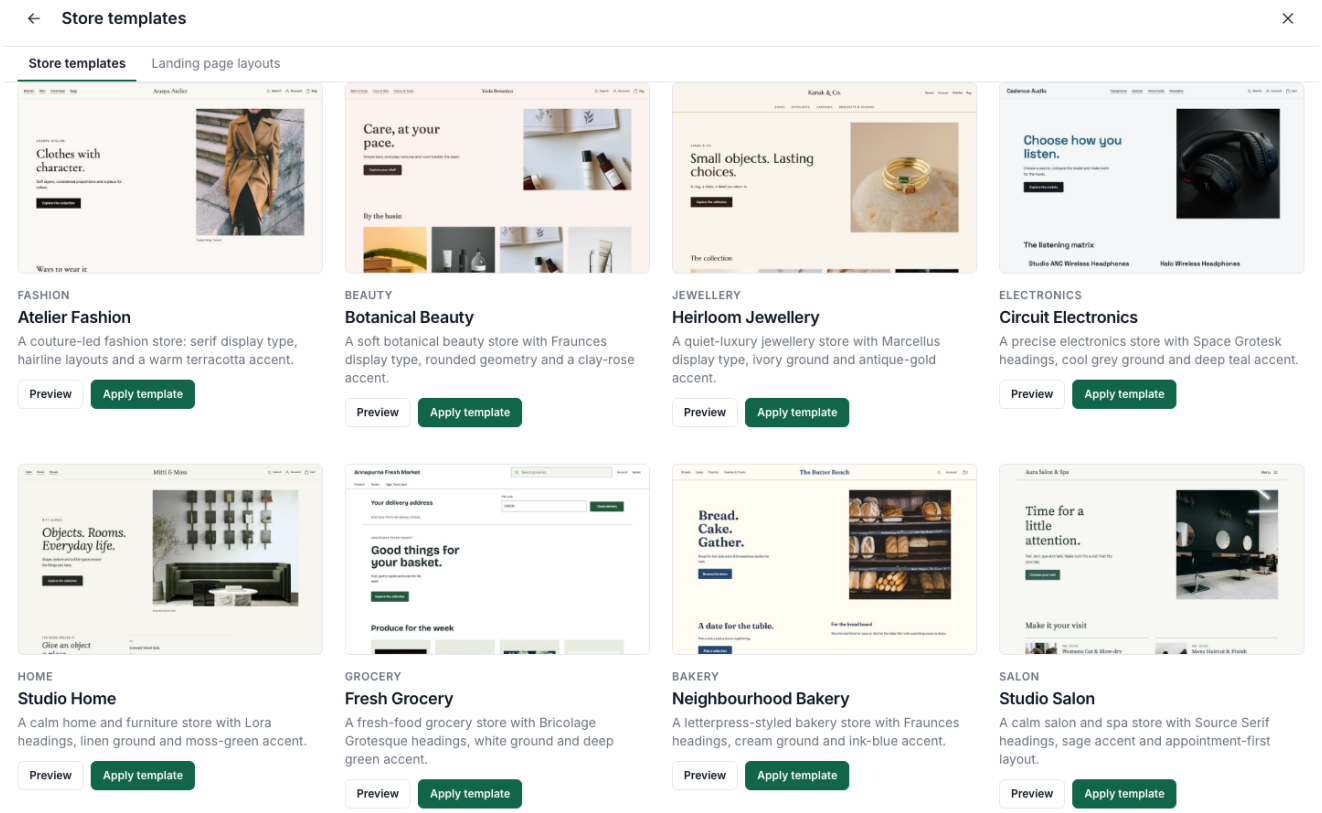

Sample products each template ships

Every template ships a curated sample catalogue (products, categories and photos). It is what the preview shows, and what **Add sample products** adds when you apply (Part 4).

Template	Sample products	Sample categories
Atelier Fashion	12	4
Heirloom Jewellery	12	4
Botanical Beauty	12	3
Fresh Grocery	12	4
Studio Home	14	4
Neighbourhood Bakery	15	4
Circuit Electronics	12	4
Studio Salon	8	3
Saanjh Ethnic Wear	20	6
Aadhya Family Fashion	22	4

This screenshot shows the first eight cards only. Screenshot pending UAT capture for the full ten.

Part 4 — Previewing, Applying and the Draft

Preview a template (nothing changes)

1. In the gallery click **Preview** on a card. A window titled **Preview:** opens over the gallery. A note at the top says: “This is how your store looks with the template. Nothing is applied or saved until you apply it.” A spinner shows while the preview is prepared.
2. Below the note are two buttons, **Desktop** (selected when the window opens) and **Mobile**. **Desktop** draws your storefront 1440 pixels wide and shrinks it to fit the window (it is never enlarged). **Mobile** draws it 390 pixels wide and 844 tall, also scaled to fit. Click between them as often as you like; the page inside the frame keeps working.
3. Next to the buttons a line reads “Showing sample products — applying keeps your own catalog”. It appears for any template that ships a sample catalogue (all ten today) and is hidden for a template that has none.
4. Click around inside the frame: home page, product list, product pages, cart and the rest. Products you see are the template’s labelled **sample products**, not your own. On a sample product’s page the reviews, questions and answers, bundles, specifications, size chart and customer photos areas load without error but are empty, because the samples carry no such data. (Checking delivery by pincode on a sample product is not supported in the preview.)
5. In the window footer: **Open in a new tab** (opens the same preview full size in a browser tab), **Close**, and **Apply template**, which closes the window and opens the apply dialog for the same template. **Apply template** is greyed out if the template needs a storefront upgrade or a draft is still loading.
6. If the preview cannot be prepared: “The preview could not be loaded.” with a **Retry** button.

The preview never writes to your drafts, your live store or your history. In the preview the template’s header and footer look is shown exactly as it will be applied; only your logo, store name and navigation links are carried over from your store. If a section on your homepage still holds the platform’s untouched starter text (for example the starter hero “Elevate Your Lifestyle”), the template’s own text and image appear instead.

Screenshot pending UAT capture — Preview window at Desktop width with the sample-products line Screenshot pending UAT capture.

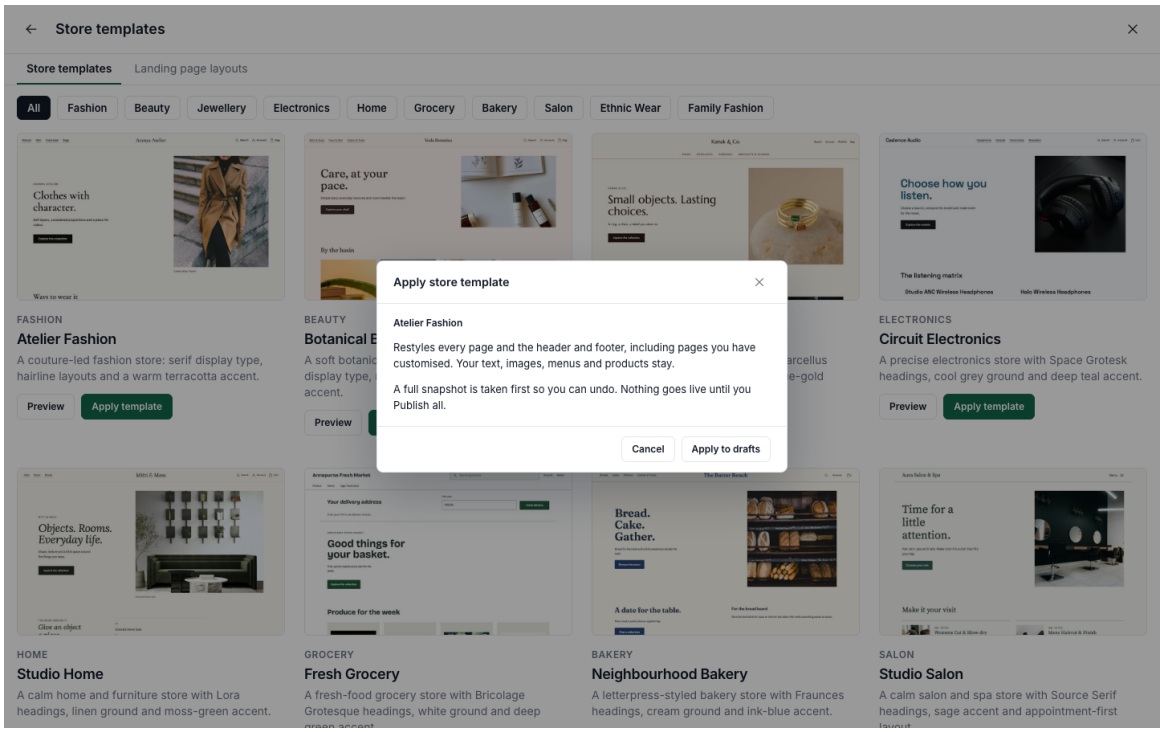

Screenshot pending UAT capture — Preview window with Mobile selected Screenshot pending UAT capture.

Apply a template

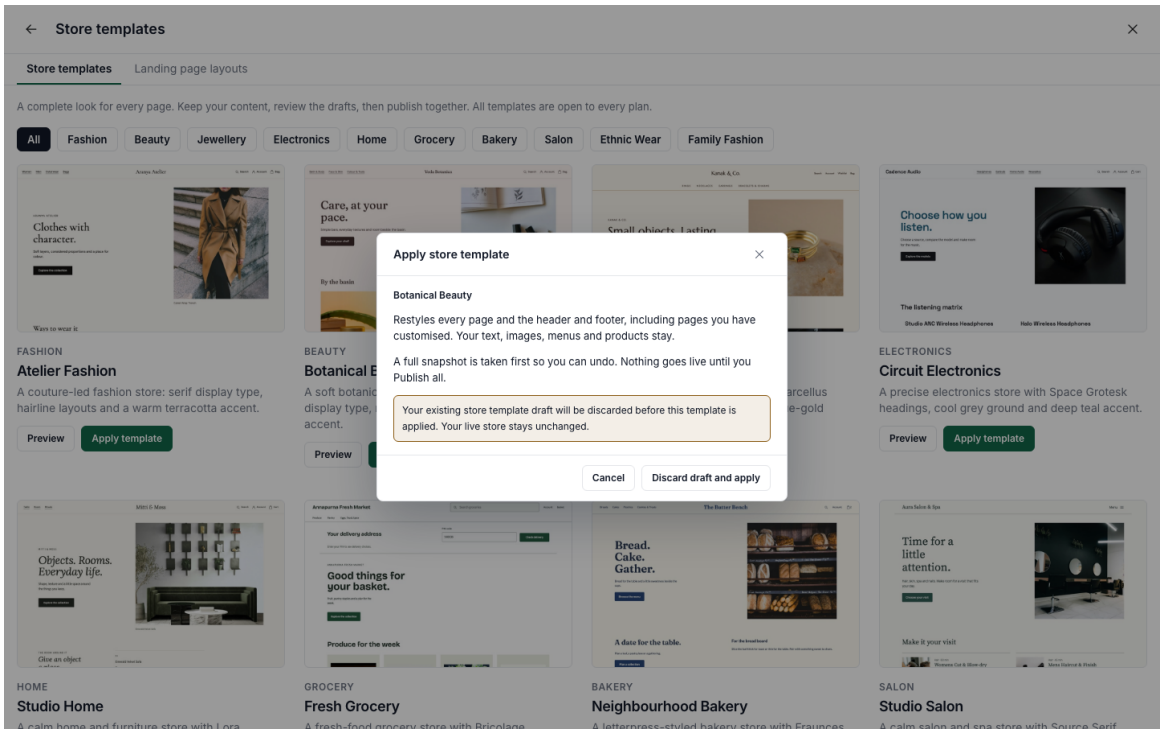

1. Click **Apply template** on the card.
2. Dialog **Apply store template**. Two lines of explanation: “Restyles every page and the header and footer, including pages you have customised. Your text, images, menus and products stay.” and “A full snapshot is taken first so you can undo. Nothing goes live until you Publish all.”
3. If you already have a store template draft, a third line warns: “Your existing store template draft will be discarded before this template is applied. Your live store stays unchanged.” and the confirm button reads **Discard draft and apply** instead of **Apply to drafts**.
4. If the dialog shows an options block, set it (below). The block appears only when the template has a sample catalogue or would add category links to your menu.
5. Click **Apply to drafts** (shows **Applying...** while working).

Options in the dialog

- If another template is currently live, a blue notice says “ is currently applied to your store.” and “Applying replaces the sample content that came with . Your own edits are kept: text, images and products you added or changed yourself.”
- **Add sample products** (switch). Describes the catalogue: “N products in N categories, with photos. Samples can be ordered until you delete them. They stay hidden until you Publish all.” It is **on by default only for a store that has no products of its own**. If your store already has products, it is off and the dialog says “Your store already has N products, so samples are off by default.” Your real catalog is never replaced either way. You can switch it on to add the samples as well.
    - Free product slots: “Uses N of your N free product slots (each variant uses one).” If your plan has room for only part of the catalogue: “Your plan has room for N of the N sample products, so we’ll add those. Upgrade your plan to get the rest.” (the same wording applies to categories). If there is no room at all the switch is disabled: “Samples need N product slots (each variant uses one) but your plan has N free. Upgrade your plan or delete products to add samples.”
    - When switching from another template: “The N untouched sample products from are replaced.”
- **Create category menus** (switch). Shown when the template can link to its categories: “Adds N category links to your header and a Shop column in your footer.” If you built your own menu the label reads **Replace my menu with category menus** and the hint says “You built your own menu, so it is kept unless you tick this. Undo restores it.”
- If the sample products do not fit your plan the apply fails with: “Your plan has no room for the sample products. Untick Add sample products and apply again, or upgrade your plan.”

Apply store template dialog with both explanation lines and the Apply to drafts button

Dialog when a draft already exists: replace notice and Discard draft and apply button

If apply fails, the dialog shows one of these (nothing is changed):

Situation	Message
No connection	“We could not reach the server. Check your connection and try again.”
Request rejected	“The template could not be applied because the request was rejected.”
Template has sections your store does not support	“This template cannot be applied because some of its sections are not supported by your store yet.”
Store changed meanwhile	“Your store changed while you were applying this template. Reload the page and try again.”
Template withdrawn	“This template is no longer available. Close this dialog and refresh the gallery.”
Server error	“Something went wrong on our side. Nothing was changed. Please try again in a moment.”
Sample products do not fit your plan	“Your plan has no room for the sample products. Untick Add sample products and apply again, or upgrade your plan.”
Anything else	“The template could not be applied. Save any pending edits and try again.”

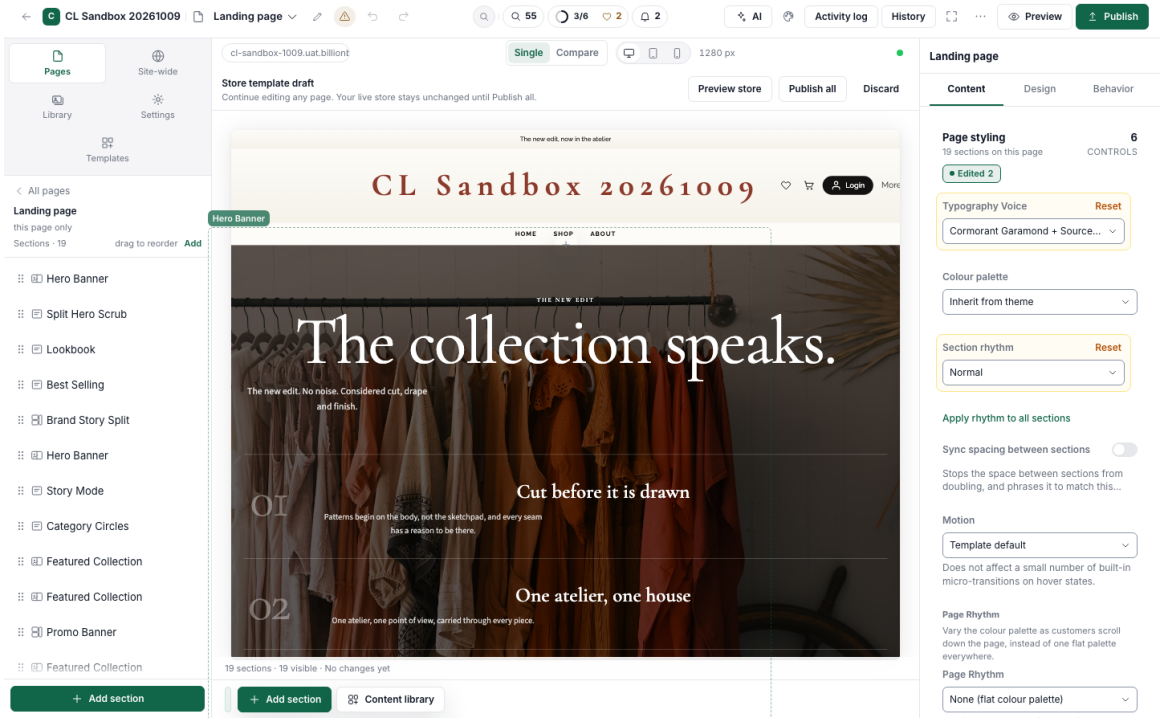

An error code may be shown with “If this keeps happening, contact support and quote the details above.”

The draft banner

After a successful apply, the editor shows the **Store template draft** banner:

- **Preview store** (**Opening preview...** while loading) — opens the full storefront with the draft in a new browser window (unlike the gallery’s **Preview**, which opens inside the editor). If the browser blocks the window, allow pop-ups for the admin site. If no storefront URL is configured: “Store preview is unavailable until a storefront URL is configured.”
- **Publish all** — goes to the review dialog (Part 5).
- **Discard** — asks “Discard store template draft?” (see Part 5).

You can keep editing any page while the draft exists. Your edits are saved into the draft and included when you publish.

Store template draft banner with Preview store, Publish all, Discard

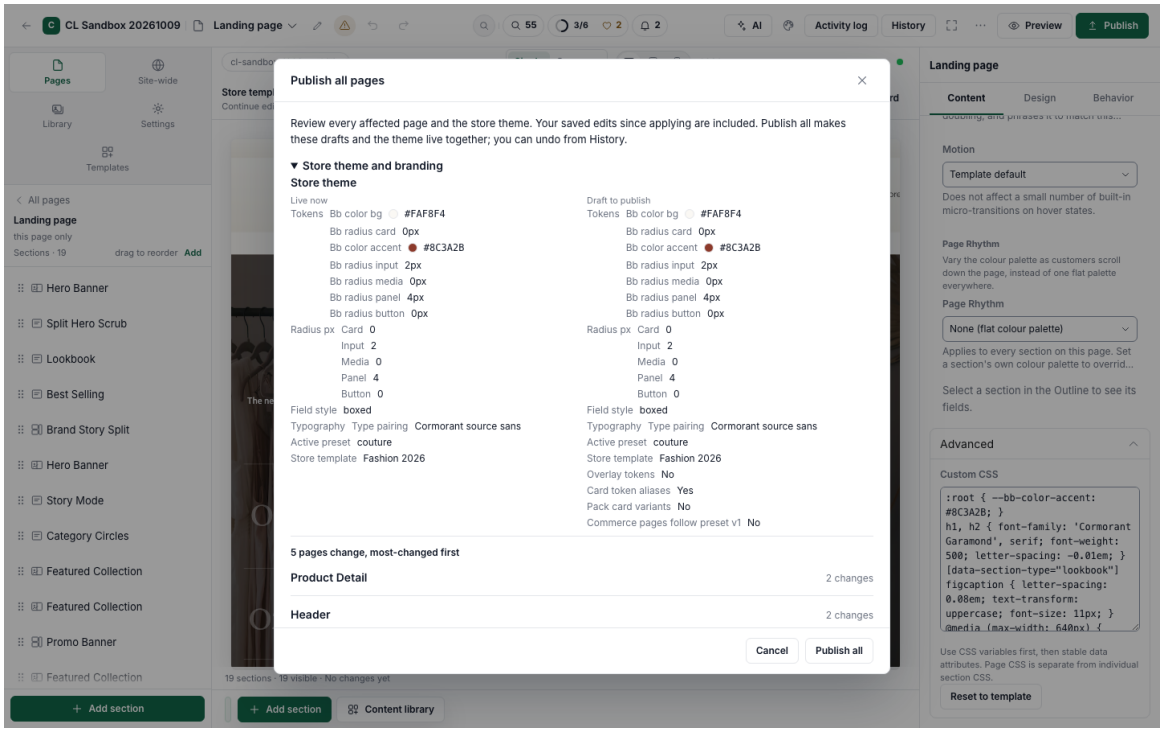

Part 5 — Publishing, Discarding and Undoing

Publish all

From the banner click **Publish all**. The dialog **Publish all pages** says: “Review every affected page and the store theme. Your saved edits since applying are included. Publish all makes these drafts and the theme live together; you can undo from History.”

- While loading: “Loading the latest draft changes…”.
- Each affected page (and **Page styles**, and **Store theme and branding**) lists **Live now** next to **Draft to publish**; a value that has no setting shows **Not set**, and an unaffected item shows **No changes**.
- If the review cannot be loaded: “The detailed change review is unavailable. Save pending edits and refresh. Publishing stays disabled until the review can be loaded.” You cannot publish until it loads.
- Click **Publish all** (**Publishing…** while working). Pages and branding go live together, all or nothing.
- On failure nothing goes live: “Publishing failed. Your drafts are unchanged; nothing went live.” or, offline, “We could not reach the server. Your drafts are unchanged; nothing went live. Check your connection and try again.”

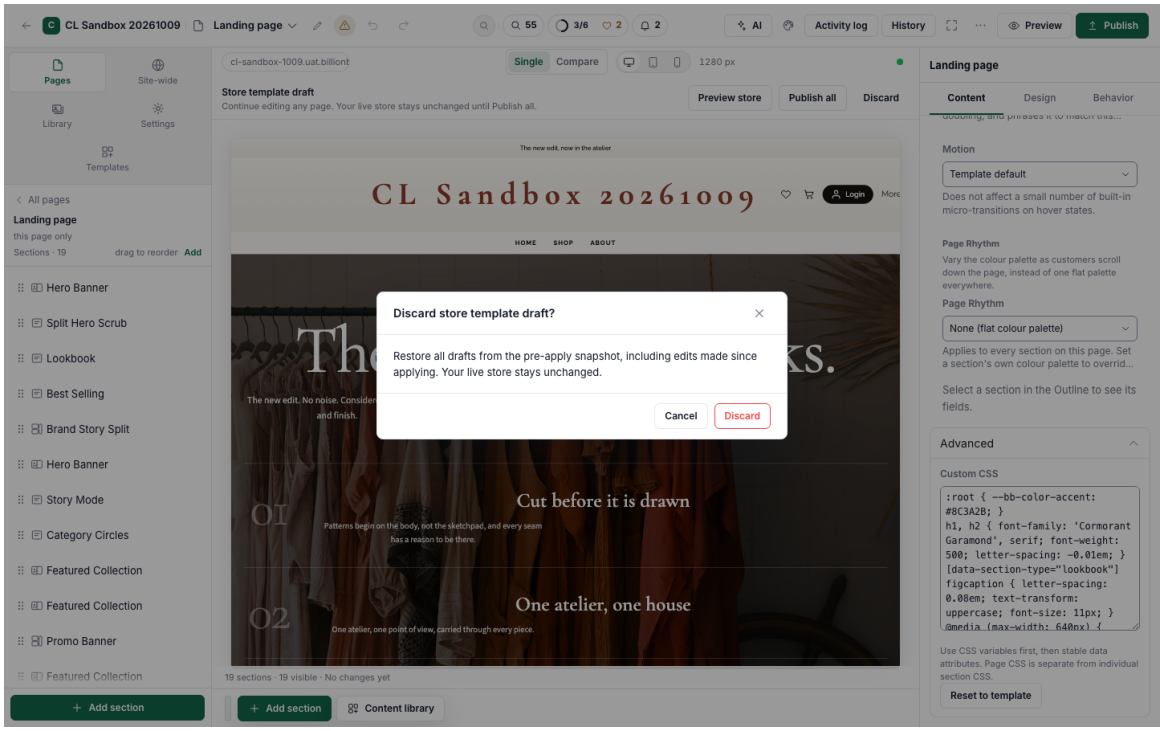

Use the banner’s **Publish all** to make a template live.

Publish all pages dialog with Live now / Draft to publish rows

Discard (before publishing)

On the banner click **Discard**. Dialog **Discard store template draft?**: “Restore all drafts from the pre-apply snapshot, including edits made since applying. Your live store stays unchanged.” Confirm with **Discard** or back out with **Cancel**. Edits made to drafts since applying are lost. Failure: “The draft could not be discarded. Try again.”

Discard store template draft? confirmation

Undo (after publishing)

Open **History** (Part 6) and use **Undo store template live** on the most recent published application. The confirmation **Restore your live store?** states: “This immediately restores the full pre-apply snapshot to your LIVE store: published pages, page drafts, theme, branding and menus. Every edit made after applying this template is replaced. This is not a draft-only change.” It adds: “Sample products from this template are deleted; samples you edited or that have orders are kept.” After a successful undo a result message reads “Undo removed N sample products and restored N.”, followed, if any were kept, by “Kept because you edited them or they are in use:” and the list of those products. Template render settings applied with the template are restored too, and a custom menu you had before is restored. Confirm with **Restore live store** (**Restoring…** while working).

	Discard	Undo store template live
When	Draft exists, not yet published	After Publish all
Touches live store?	No	Yes, immediately
Restores	Drafts from the snapshot	Published pages, drafts, theme, branding, menus; removes untouched sample products
Edits made since	Lost	Lost
Which applications	The current draft	Latest published application only

Part 6 — History (Store Templates)

Open it from the Store Editor top bar: the **History** button, or from the **Version history** dialog, which embeds a **Store template history** section. Version history is available on every plan.

The section says: “Review previous applications. Undo restores the full pre-apply snapshot to your live store, including pages, drafts, theme, branding and menus. Later edits are replaced. Sample products added by the template are removed unless you edited them or they have orders.”

Each row shows the template and **Applied** time, plus **Published** time once live. **Load more** fetches older rows. Empty: “No store template applications yet.” Errors: “History could not be loaded. Try again.” and, on a failed undo, “The live store could not be restored. Your confirmation remains open; try again.”

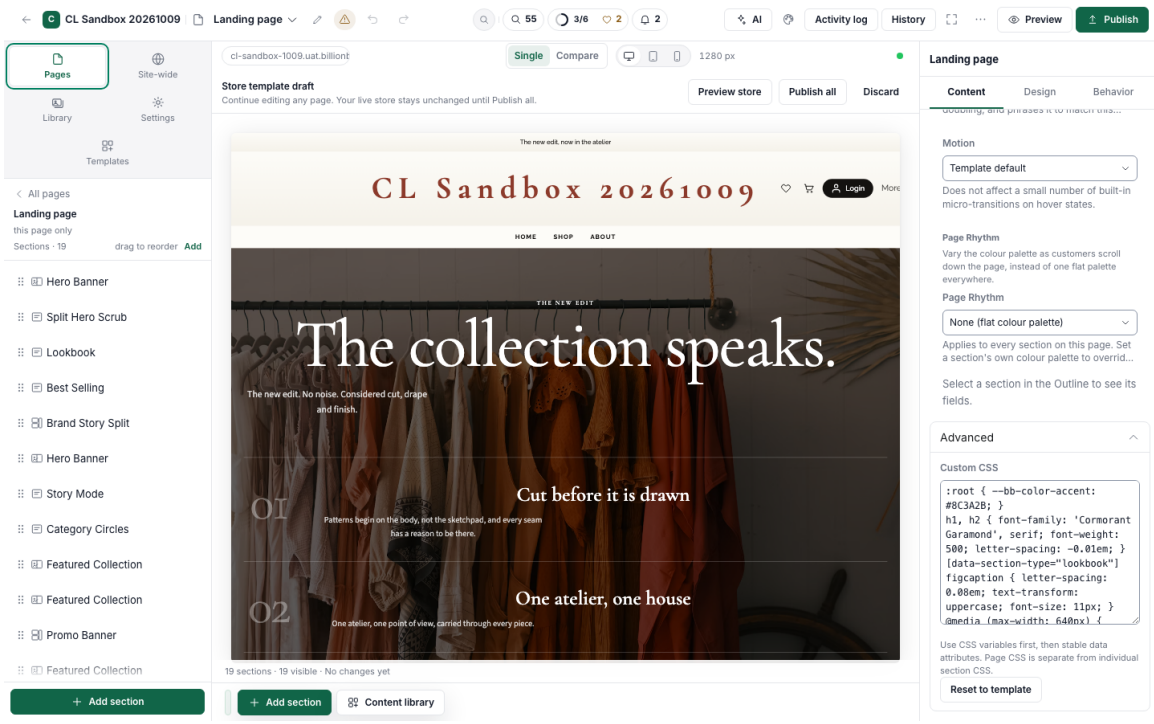

Each row carries a status: **Live**, **Discarded**, **Undone**, or **Replaced by a newer template** (a pending one shows **Draft**). The **Undo store template live** button is shown on every row but is enabled only on the latest published application, and only when no draft is pending; on all other rows it is greyed out.

Screenshot pending UAT capture — Store template history with an application row and Undo store template live Screenshot pending UAT capture — Restore your live store? confirmation

Part 7 — Fine-Tuning with Custom CSS

For merchants who want a small tweak, the page inspector has an **Advanced** section (open by default) with a **Custom CSS** field and a **Reset to template** button.

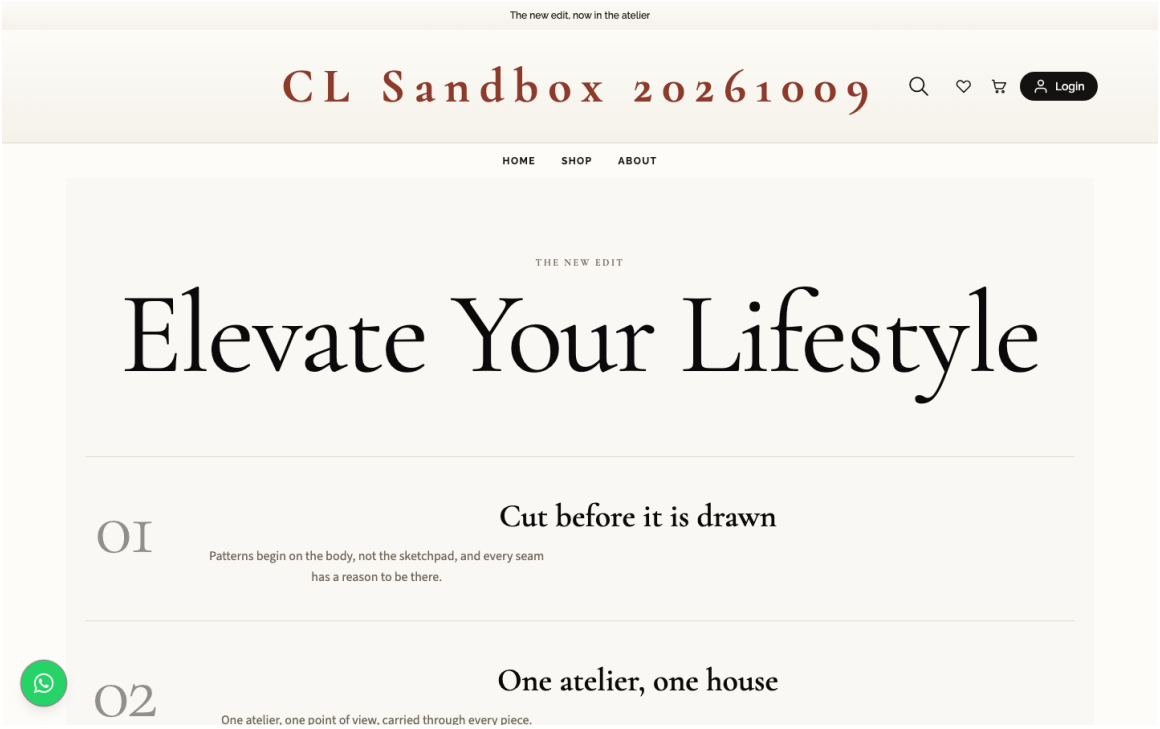

- The help line reads: “Use CSS variables first, then stable data attributes. Page CSS is separate from individual section CSS.”
- If your CSS breaks the template’s guidelines, a notice appears: “These template CSS guidelines are advisory for your edits. Saving is still available.” with the specific issues listed. It never blocks saving.
- **Reset to template** puts the applied template’s own CSS for that page back into the field. It is disabled while “Loading template CSS…”, or when the template has no CSS for the page (“The applied template has no CSS for this page. Your CSS is kept.”) or it failed to load (“Template CSS could not be loaded. Your CSS is kept.”).
- Custom CSS applies only to the page it is set on.

Page inspector Advanced section with Custom CSS field and Reset to template

Part 8 — What Your Customer Sees

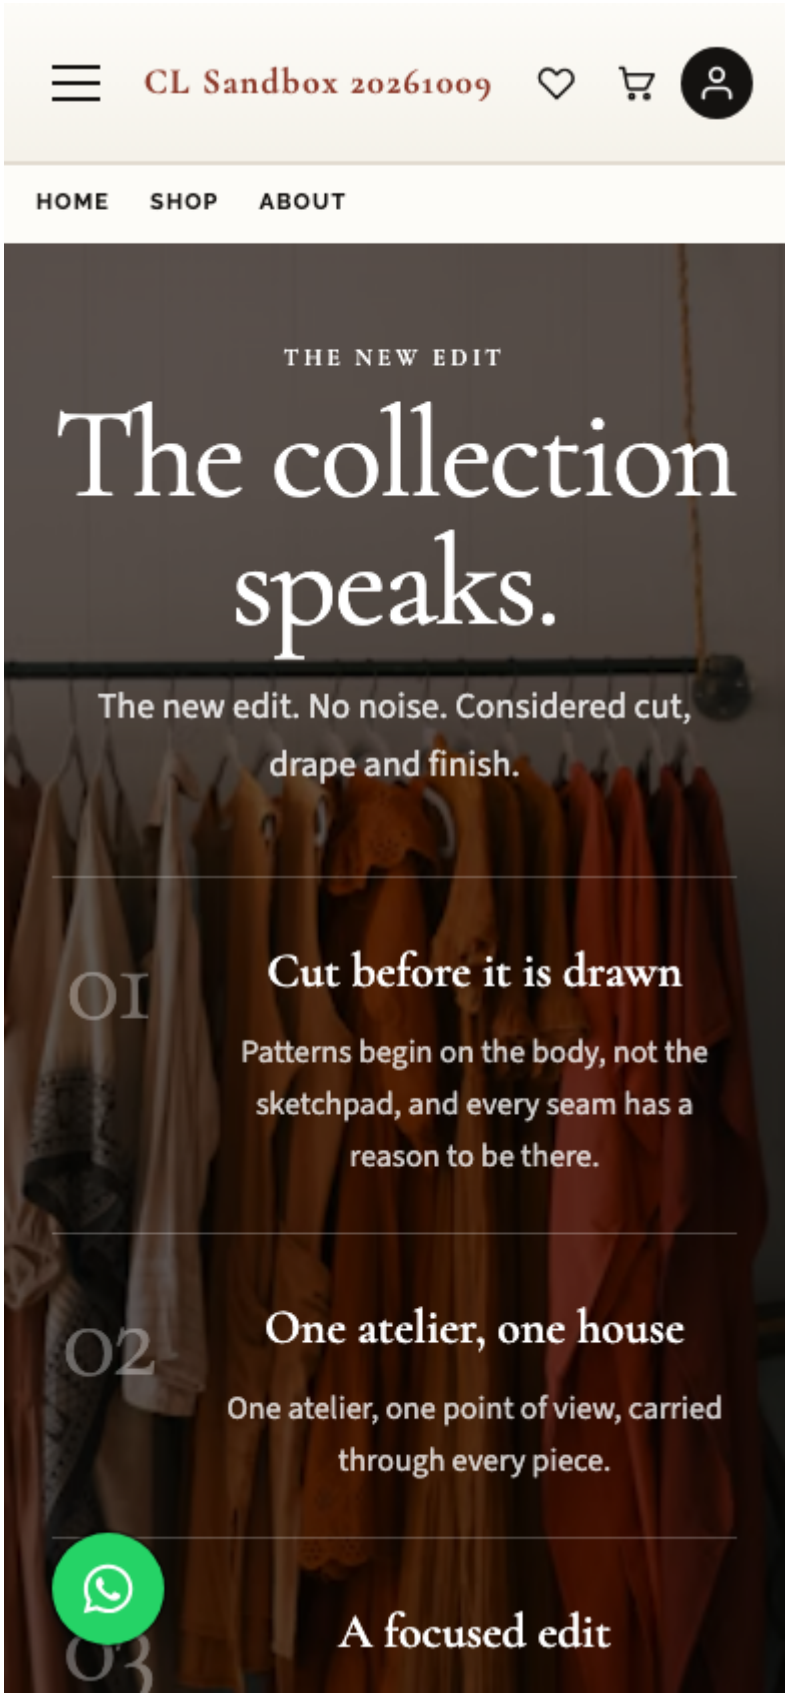

- Before **Publish all**: nothing changes. Customers keep seeing the old look.
- After **Publish all**: the new header, footer, homepage, theme (colours, fonts) and the template's standard pages appear together, with your text, images, menus and products.
- Page-level custom CSS is applied to that page only; it cannot leak onto other pages.
- Pages the template does not include keep their existing look.
- After **Undo store template live**: the earlier look returns immediately.
- Header and footer: customers see the template's header and footer look, with your logo, store name and navigation links.
- Products: customers see your own catalog. Sample products appear only if you switched **Add sample products** on (or the store had no products); they are hidden until **Publish all**, and they can be ordered until you delete them.
- On a phone, tapping search in the header and then pressing Enter closes the search panel and shows the results; going back does not leave the panel stuck open. A product list with no matches shows "No products found" with **Clear filters** (when filters are active), **Back to previous results** (when there is a previous list to return to) and an **All Products** button that clears every filter (the button text may display in capitals).

Storefront homepage before applying (same store)

Same homepage after Publish all, desktop

Same homepage after Publish all, 390px wide

An inner page (login or about) after publishing

Part 9 — Rules, Roles and Plans

- **Plans**: Store templates are open to every plan. Nothing is locked.
- **Roles**: only admin users can apply, publish, discard or undo. Staff users cannot apply. Staff-only tooling for exporting a store as a template is internal and not covered here.
- **One draft at a time**: applying while a draft exists replaces it (you are told first).
- **Content is kept**: text, images, menus and products stay; your item count and order win over the template's sample items. Exception: a section still holding untouched starter content takes the template's content.
- **Header and footer**: the template's look wins in preview and Apply; only logo, store name and navigation links are yours.
- **Samples**: preview always shows labelled sample products; Apply keeps your catalog and adds samples only if the **Add sample products** switch is on and your plan has room.
- **Design is replaced**: the template's pages, header, footer and theme override your earlier customisation on the pages it covers.
- **Branding**: applying clears any selected Identity; the template's theme and type pairing take over.
- **Undo scope**: only the latest published application, and only with no pending draft.
- **Compatibility**: a template that needs a newer storefront shows "Needs a storefront upgrade before applying."

Part 10 — Testing the Feature End to End

This part is a hands-on checklist for anyone signing off Store Templates: a tester, a release manager, or a merchant doing their own acceptance pass before trusting the feature with a live store. Read Parts 2 to 9 once first so the screens are familiar, then follow the checklists below in order. Each one builds on the state the one before it left behind, so do not skip ahead.

Every row has four columns: what you do, what you should see, and what it means if you see something else. A row is only **PASS** if the "What you should see" cell is true exactly as written. Write down the row number of anything that is not.

Before you start

Test only on the sandbox store. Never run this on a live merchant's store. Applying a template and publishing it restyles every page of the store.

Fixture	Value
Environment	UAT. Admin panel at `admin.uat.billionbiz.in`; storefront at the sandbox store's own UAT domain
Store	The UAT sandbox store, id `9bf89f6c` (client `cl-sandbox-1009`). Check the id before you start, and use the same store in the admin panel and on the storefront
Login	The store **owner** (an admin-role user) for Checklists A to G and I to J. A **staff** user for Checklist H only
Admin screen size	Desktop, 1280 pixels wide or more. The Store Editor is a desktop tool
Storefront screen sizes	1440 pixels wide (desktop) and 390 pixels wide (phone)
Browser	One current desktop browser. Pop-ups allowed for the admin site (needed only for the draft banner's **Preview store**, B6/B7)

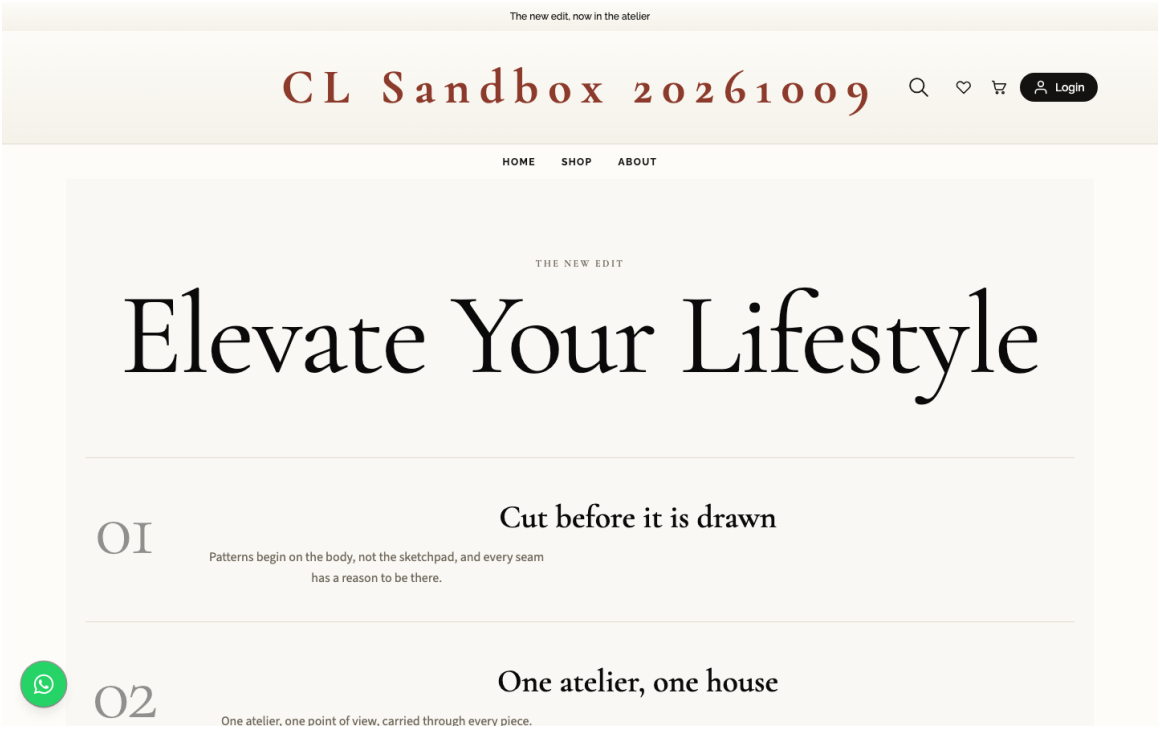

Must exist before the first row

Must exist	Symptom if it is missing
The sandbox store is on a storefront release that supports Store Templates (the **Storefront release compatibility** requirement)	Every one of the ten cards shows **Needs a storefront upgrade before applying.** with an **Upgrade your storefront** link, and **Apply template** cannot be used. Nothing on this page can be tested until engineering assigns a supporting storefront release to the sandbox
The admin user is an admin or owner of the store	The gallery shows **Store templates could not be loaded.** (staff users are refused by the server, see H1)
No store template draft pending, and no earlier template applied (a clean start)	The first-run picker does not open on its own (A1 cannot be run), and the apply dialog already shows the replace warning. If a draft is pending, finish it with **Discard** (Checklist E) first
The store has its own **store name** set (Settings, company name)	Template sample copy shows the platform default name instead of the sandbox's name (C8 cannot be judged)
The homepage has some of your own content: at least one edited heading and one paragraph, one image you uploaded, and a header menu with at least three entries	You cannot prove "your content is kept" (Checklist C). Add them, save, and publish them before you begin
At least three products, one category and one order exist	Product, category and order pages look sparse after publishing. That is a data limit of the store, not a template defect, but note which pages were sparse
Fonts and image hosts can load from the test machine (no ad-blocker rule on `images.unsplash.com`)	Hero photos look missing on every template (see Negative path N1)

Take a snapshot before you start

Applying and publishing change the whole store, and Undo only walks back the **latest** published template. Capture the starting state so you can prove the store came back, and so you can put it back by hand if something goes wrong.

1. **Screenshots (QA).** On the storefront at 1440 and 390 pixels, capture the homepage, the login page, the about page and the footer. Save them as `before-*.png`. These are your comparison images for D3, F5 and the visual checks in Checklist I.
2. **Write down (QA).** Company name; header menu entries in order; the exact text of the homepage hero heading and one paragraph; the number of homepage sections (the Outline panel in the editor shows **N sections**); the Theme hub colours and heading and body fonts; whether any Custom CSS exists on the homepage (Page inspector, **Advanced**).
3. **Page restore point (QA).** Open the editor top bar **History** button, stay on the **Page versions** tab and note the newest version of the homepage. This is a manual way back if Undo fails.
4. **Database restore point (engineering).** Ask engineering to take the pre-test snapshot of the sandbox store (page rows, branding and feature flags) and to keep it until sign-off. Record who took it and when. Do not run the test cycle until this is confirmed.

Storefront homepage before applying (same store)

Rules that apply throughout

- One browser tab for the admin panel unless a row says otherwise.

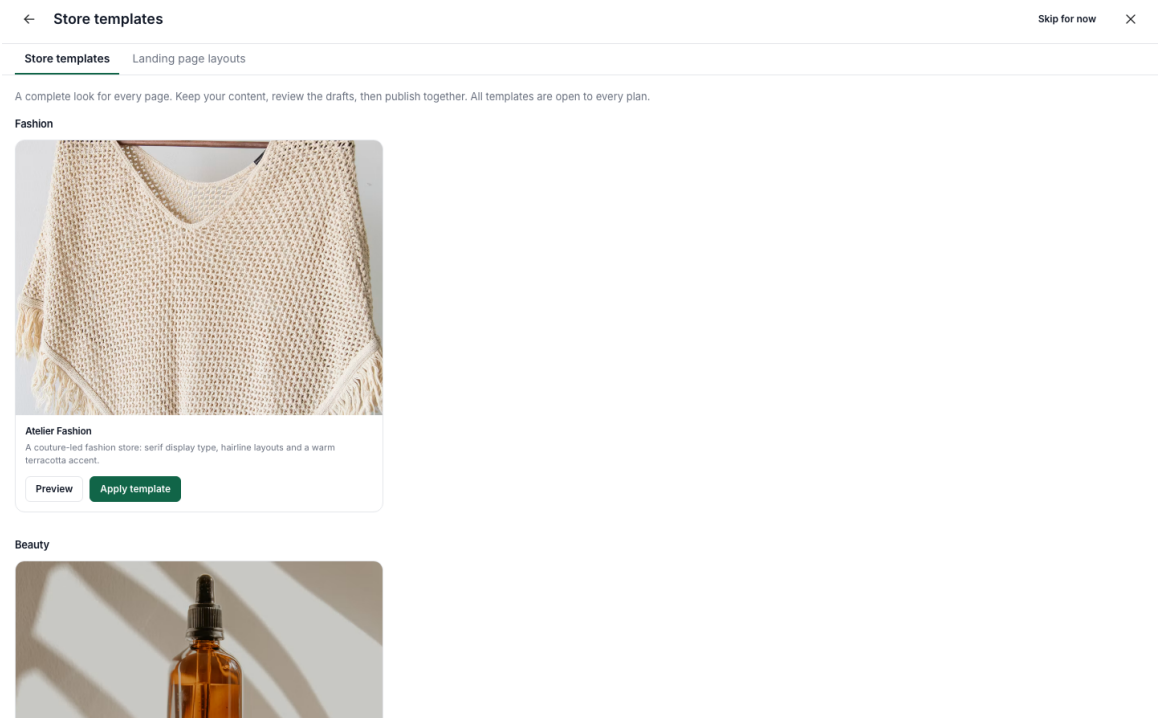

- After every **Publish all**, hard-refresh the storefront (Ctrl+Shift+R) before comparing.
- Do not click **Apply template** twice quickly. Wait for the dialog to close.
- Where a row says “the draft”, it means the **Store template draft** banner is showing at the top of the editor.

Checklist A — Entry points

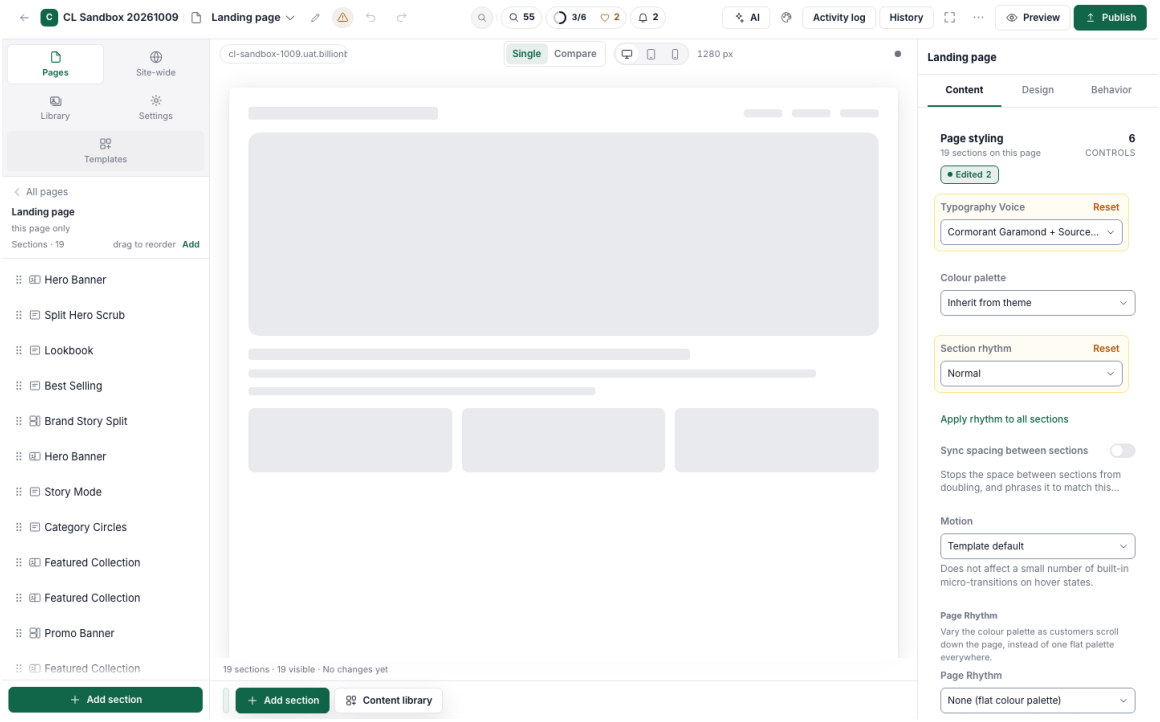

Four ways lead to the same gallery. Check each one.

#	What you do	What you should see	If you see something else
A1	On a clean sandbox (no template ever applied, no draft), open the admin panel, then **Online Store**, then **Landing Page Editor** (newer sidebar: **Landing page**). Wait a few seconds	The Store Editor opens at `/store-editor/LANDING`. A dialog titled **Store templates** opens by itself with two tabs: **Store templates** and **Landing page layouts**. A **Skip for now** link is in its header	The dialog never appears. Check the sandbox has no earlier application (the picker only opens when the store has never applied a template), no pending draft, and that **Skip for now** or a close was not already used in this browser (the choice is remembered per browser). If all three are fine, log it as a bug
A2	In that first-run dialog, click **Skip for now**. Reload the editor	The dialog closes. After the reload it does **not** open again	It opens again on reload. Log as a bug
A3	In a second browser profile (or after clearing site data for the admin site), open the editor again and click the dialog's close control instead of **Skip for now**	The dialog closes and, as with Skip, does not reopen on the next visit in that browser	Reopens every visit. Log as a bug
A4	Add `?gallery=true` to the editor address and load it	The same **Store templates** dialog opens. Closing it removes `gallery=true` from the address	The address keeps `gallery=true`, or nothing opens. Log as a bug
A5	Click the **Templates** tile in the editor's left module rail	A **Store templates** gallery panel opens	Nothing opens, or a different panel opens. Log as a bug

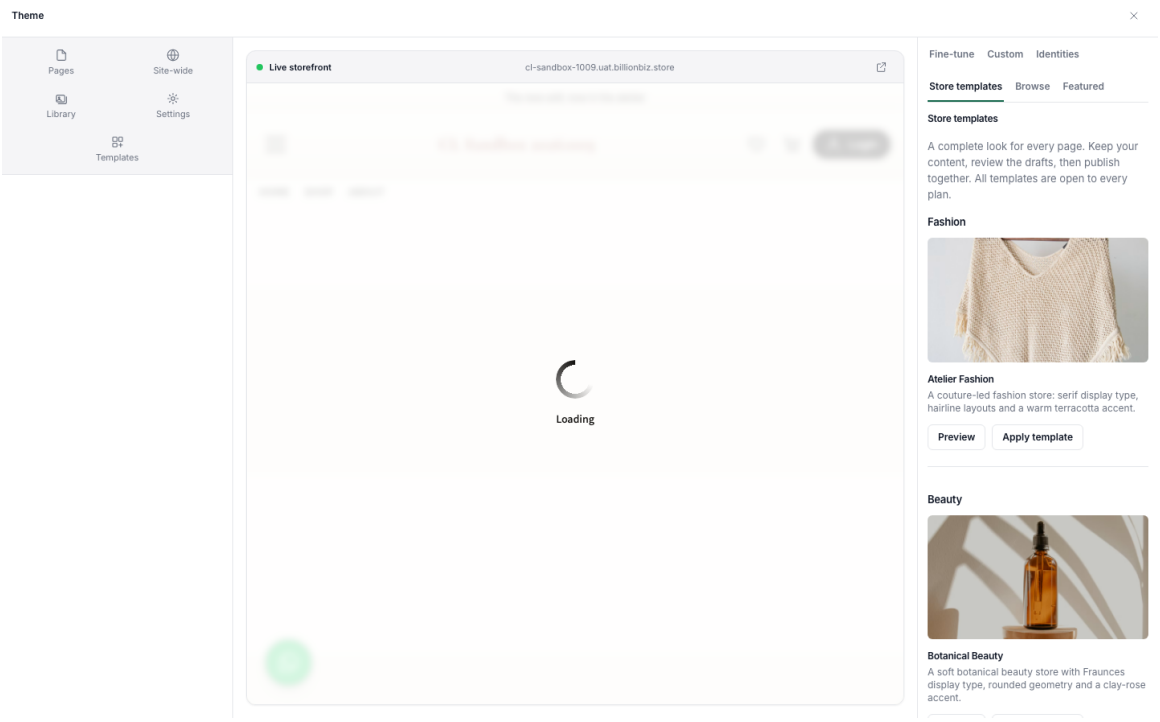

#	What you do	What you should see	If you see something else
A6	In the editor top bar open the **Store setup** checklist and click the step **Choose a store template**	The gallery opens	The step is missing, or clicking it does nothing. Log as a bug
A7	In the top bar click **Theme**, then the **Store templates** tab	The same gallery appears inside the Theme hub. The Theme hub tabs are Fine-tune, Custom, Identities, Store templates, Browse, Featured	The tab is missing or empty while A5 works. Log as a bug
A8	In each of the four galleries from A1, A5, A6 and A7, count the cards	The same ten templates, in the same order, every time	Different counts between entries. Log as a bug

The first-run Store templates picker with Skip for now

Store Editor with the Templates tile in the left rail highlighted

Theme hub open with the Store templates tab selected

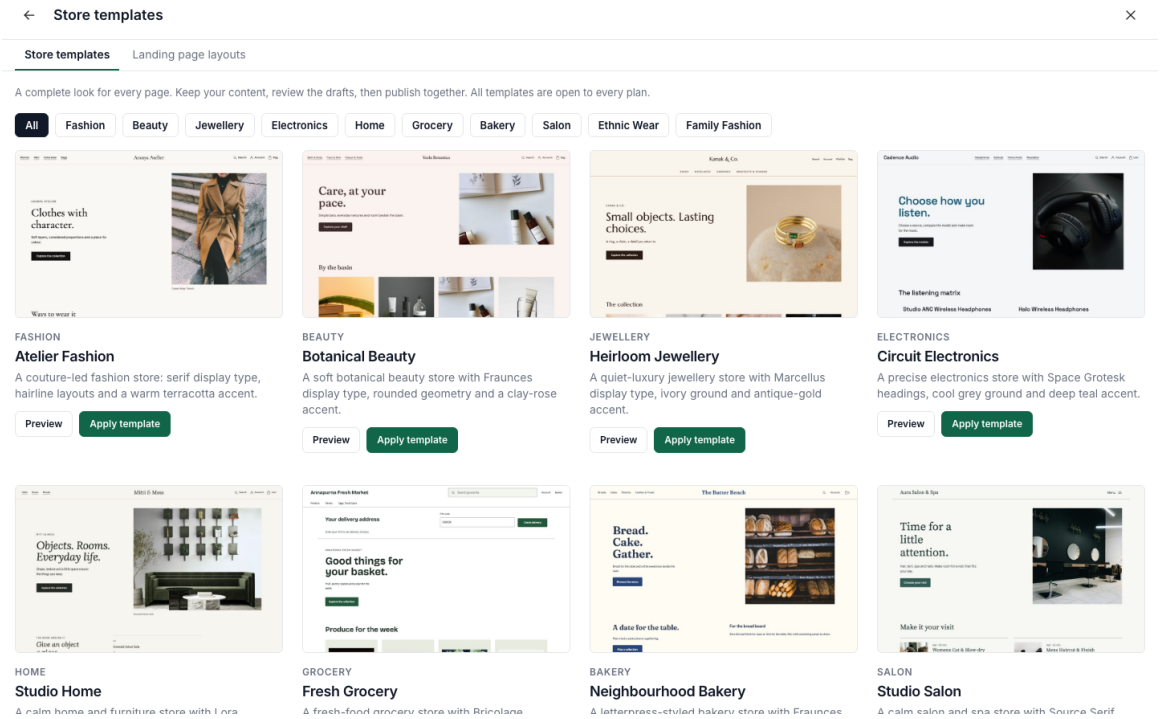

Checklist B — Browse and Preview

Preview must never change anything. Before you start this checklist, note the live homepage and confirm there is no draft banner. Check the same again at the end.

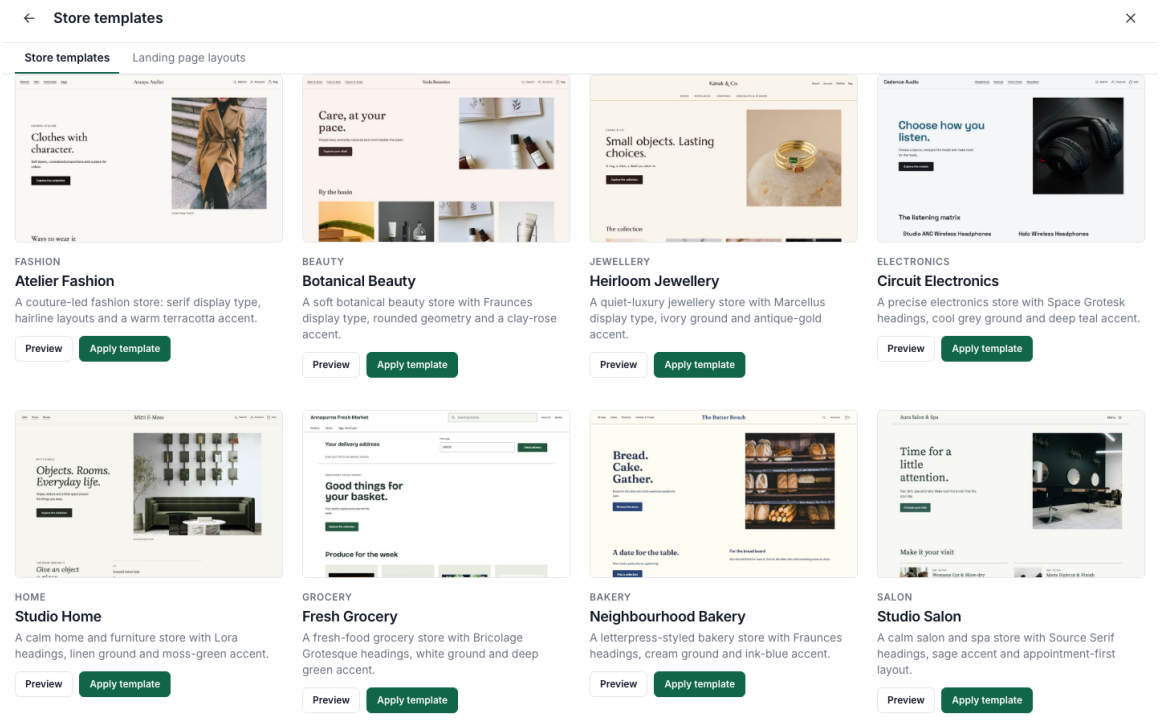

#	What you do	What you should see	If you see something else
B1	Open the gallery and read the title and description	Title **Store templates**. Description: “A complete look for every page. Keep your content, review the drafts, then publish together. All templates are open to every plan.”	Wording differs or the plan text is missing. Log as a bug
B2	Scroll the gallery and list every card by name	Ten cards: **Atelier Fashion**, **Heirloom Jewellery**, **Botanical Beauty**, **Fresh Grocery**, **Studio Home**, **Neighbourhood Bakery**, **Circuit Electronics**, **Studio Salon**, **Saanjh Ethnic Wear**, **Aadhya Family Fashion** (the last two are labelled Ethnic Wear and Family Fashion and sit after Salon). Each shows a thumbnail, a name, a short description, a **Preview** button and an **Apply template** button	Fewer than ten, a duplicate, or a card missing a button. Log as a bug
B3	Click **Preview** on **Atelier Fashion**	A window titled **Preview: Atelier Fashion** opens over the gallery (no new browser tab). A spinner shows, then your storefront in the Fashion look. The note reads “This is how your store looks with the template. Nothing is	A blank frame, or a new browser window opens instead. Log as a bug

#	What you do	What you should see	If you see something else
		applied or saved until you apply it.”	
B4	Close the preview window with **Close**. Back in the editor, look at the top of the page and open **History**	No **Store template draft** banner appeared. The live storefront (reload it) is unchanged. **History**, **Store templates** tab, shows no new row	A banner or a history row appeared from a Preview. Preview must write nothing. Log as a severe bug
B5	Repeat B3 and B4 for each of the other nine templates, one at a time	Each opens in its own look, with its own title. After all ten, the live store, the drafts and the history are still unchanged	Any preview changed the live store, or opened the previous template’s look. Log the template name
B6	Apply **Atelier Fashion** to drafts (Checklist C). In the browser settings block pop-ups for the admin site, then click **Preview store** on the draft banner	The preview does not open, and no blank window is left behind. (The gallery **Preview** in B3 is unaffected by pop-up blocking because it opens inside the editor)	A stuck **Opening preview...**, or a blank window left behind. Log as a bug
B7	Allow pop-ups again and click **Preview store** a second time	The storefront opens in a new window with the draft	It still does not open. Log as a bug
B8	If the sandbox’s storefront release does not support templates: look at the cards	Each card says **Needs a storefront upgrade before applying.** followed by a link **Upgrade your storefront**. **Apply template** is disabled on those cards	The card is silent and Apply is enabled. Log as a bug (the server will refuse the apply with a 409)
B9		You land on the **Storefront upgrade**	The link goes nowhere or to a

#	What you do	What you should see	If you see something else
	Click **Upgrade your storefront**	page of the admin panel (path `/online-store/storefront-upgrade`)	wrong page. Log as a bug
B10	Hover the **Needs a storefront upgrade before applying.** line	A tooltip names the missing capability (for example `storeTemplates>=1`). This is expected today; see Known open items	n/a
B12	With no storefront URL configured for the store (if you can arrange it), look at the **Preview** buttons	Greyed out on every card, so no window opens. The draft banner shows “Store preview is unavailable until a storefront URL is configured.” once a draft exists	Preview opens a blank frame. Log as a bug
B11	Reload the editor, open the gallery and wait for it to load, with the network switched off for the reload	The message “Store templates could not be loaded.” appears	A blank panel with no message. Log as a bug

Gallery panel with cards, Preview and Apply template buttons visible

Gallery scrolled so the first eight cards show

Screenshot pending UAT capture for all ten cards.

Screenshot pending UAT capture — A card showing the storefront-upgrade message

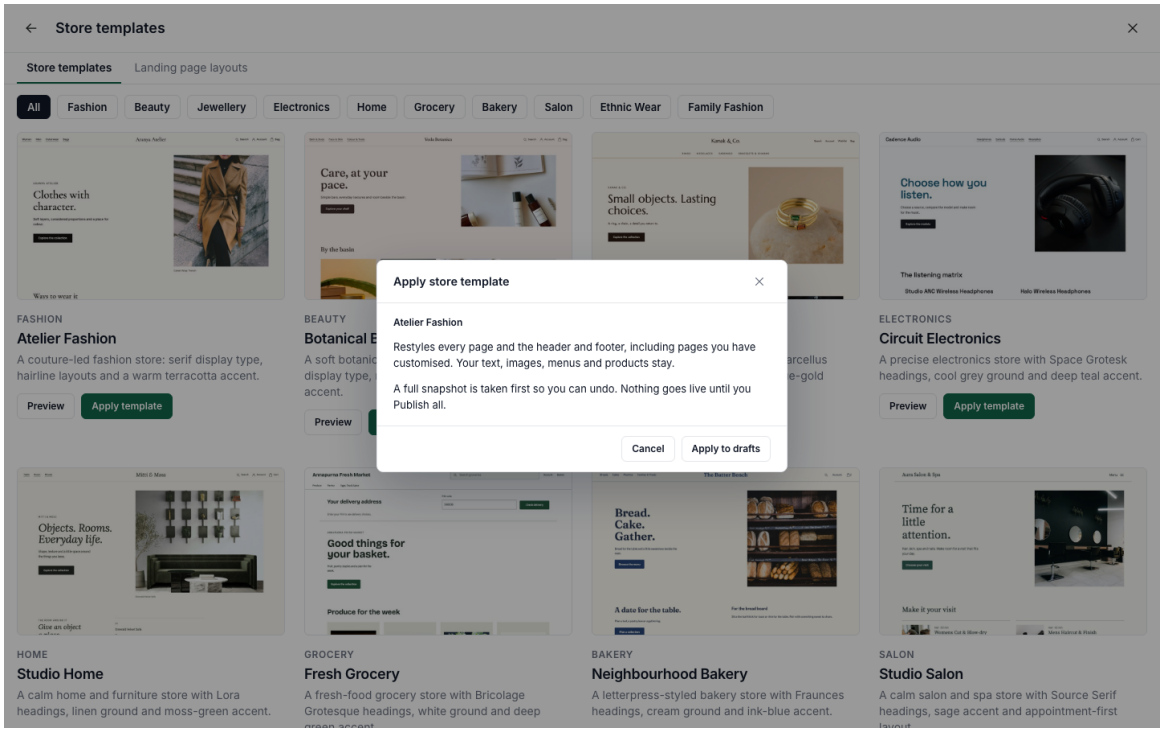

Checklist C — Apply to drafts

Use **Atelier Fashion** first. Use the homepage text, menu, count of sections and company name you noted in the snapshot step.

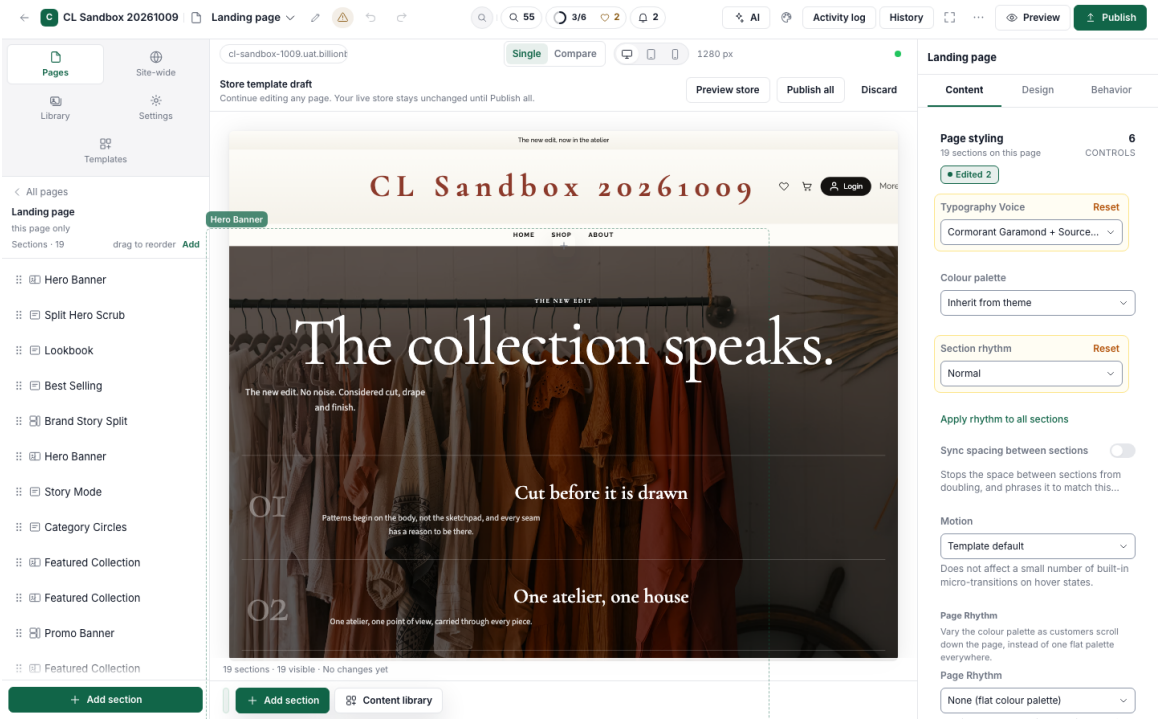

#	What you do	What you should see	If you see something else
C1	In the gallery click **Apply template** on **Atelier Fashion**	A dialog titled **Apply store template** with the template name, then: “Restyles every page and the header and footer, including pages you have customised. Your text, images, menus and products stay.” and “A full snapshot is taken first so you can undo. Nothing goes live until you Publish all.” Buttons **Cancel** and **Apply to drafts**	Missing line, or the button already says **Discard draft and apply** (a draft already exists, go back to the Must-exist table)
C2	Click **Cancel**	The dialog closes. No draft banner. Live store unchanged	A draft was created by Cancel. Log as a severe bug
C3	Open the dialog again and click **Apply to drafts**	The button reads **Applying…**, then the dialog closes. A banner **Store template draft** appears: “Continue editing any page. Your live store stays unchanged until Publish all.” with **Preview store**, **Publish all** and **Discard**	The dialog stays open with an error. Note the message and error code and go to Negative paths
C4	Immediately reload the **live storefront** (not the editor)	Nothing has changed. Still your old look	The live storefront restyled before Publish. Log as a severe bug
C5			

#	What you do	What you should see	If you see something else
	Click **Preview store** on the banner	A tab opens on your storefront in the Fashion look: new header, footer, colours, fonts and homepage, with your own text, images and menu entries visible	The tab shows the old look, or loses your content. Log as a bug
C6	**Content kept.** In the preview compare against your notes: your edited heading and paragraph, your uploaded image, your header menu	Your texts and your uploaded image still appear. The menu has the **same entries in the same order** as before. Products and categories unchanged	Your text or menu was replaced by template sample text, or entries were added or removed. Log as a bug
C7	**No section stacking.** In the editor open the homepage and read the Outline count of sections. Write it down as N1	N1 is a plain number (the Fashion layout plus any section you added yourself). It is **not** your old count plus the template's count	A very large count with old and new sections interleaved. Log as a bug
C8	**Store name.** Read the homepage, login, sign-up, about and not-found pages in the preview	Anywhere the template speaks of "the store" it uses **your** company name. The sample brand names from the design mocks (for Fashion: Aranya) appear nowhere	A sample brand name (Aranya, Veda Botanica, Mitti & Moss, Cadence, Kanak & Co., Annapurna, The Butter Bench, Aura Salon & Spa) appears. Log as a bug with the page
C9	**Editing a draft.** In the editor change one heading on the homepage and save	Saved to the draft. Reloading the live storefront still shows the old text	The live store shows the edit before Publish. Log as a severe bug

#	What you do	What you should see	If you see something else
C10	**Re-apply keeps the count stable.** Click **Discard** on the banner and confirm. Apply **Atelier Fashion** again, then read the Outline count of sections as N2	N2 equals N1	N2 is larger than N1 (sections stacking). Log as a bug
C11	Discard again. Apply **Studio Home**, read the count as N3, then discard	N3 is the Home layout count plus your own sections only. It is **not** N1 plus Home	N3 includes Fashion sections. Log as a bug
C12	Re-apply **Atelier Fashion** one last time and leave the draft in place for Checklist D	The draft banner is present	n/a

Apply store template dialog with both explanation lines and the Apply to drafts button

Store template draft banner with Preview store, Publish all, Discard

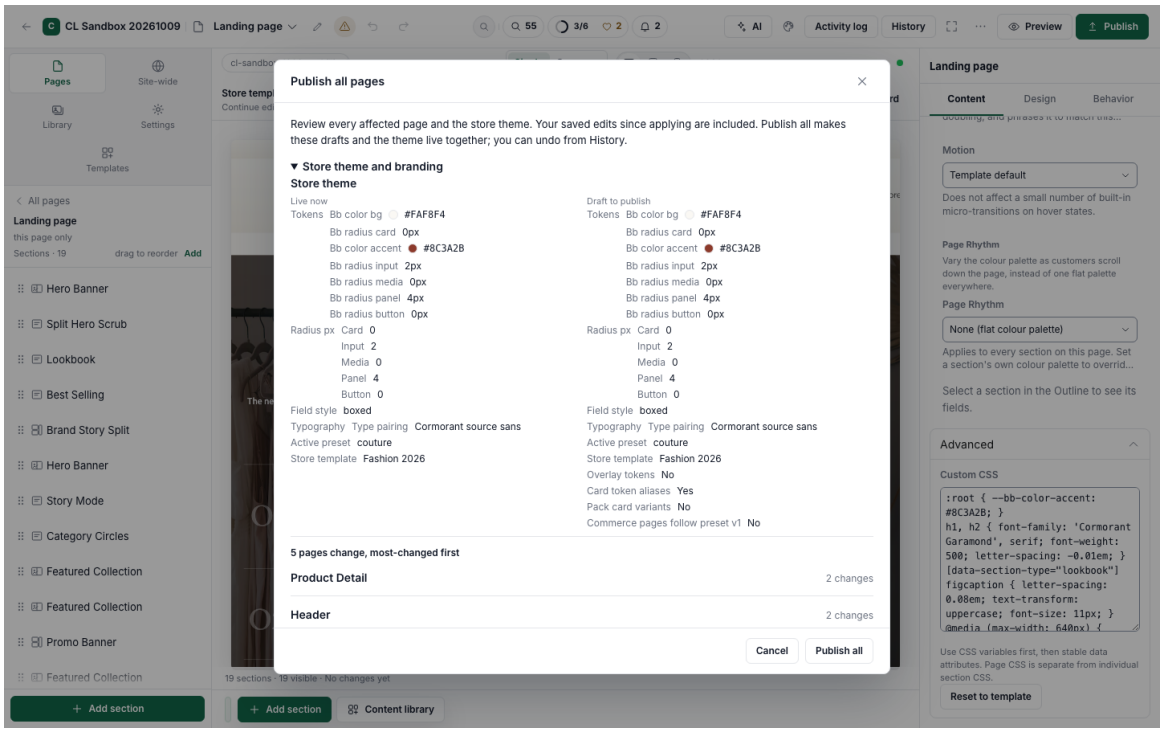

---

Checklist D — Publish all

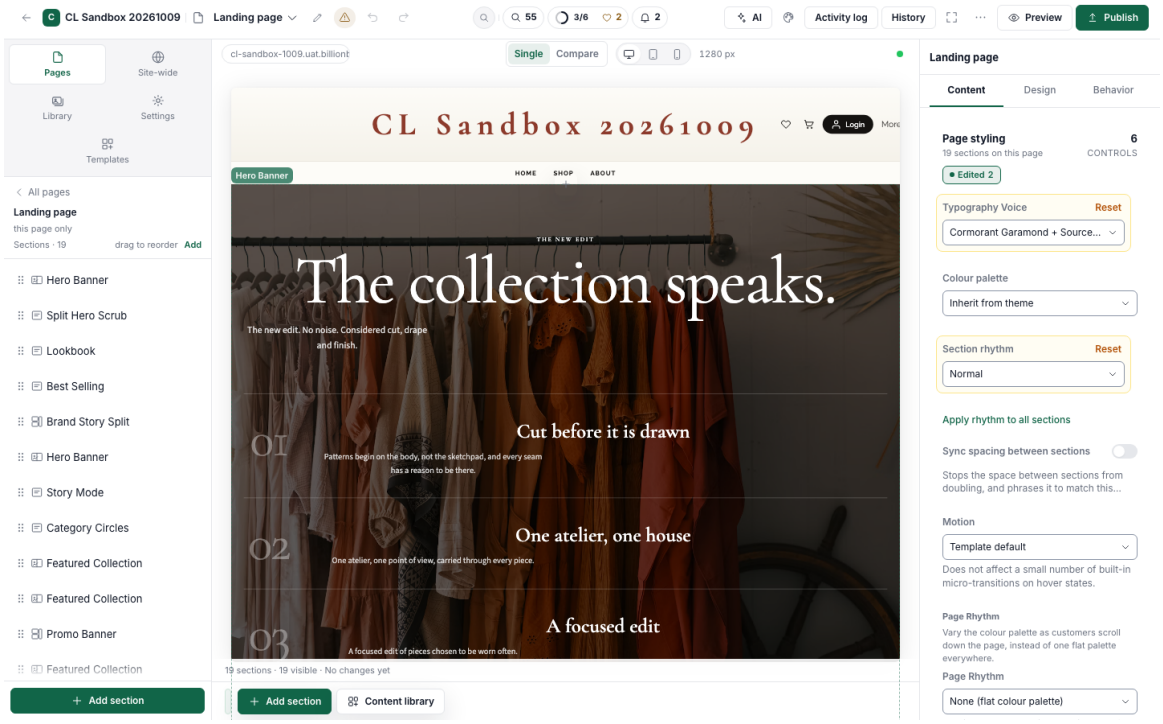

Start with the **Atelier Fashion** draft from C12.

#	What you do	What you should see	If you see something else
D1	Click **Publish all** on the banner	A dialog titled **Publish all pages**: “Review every affected page and the store theme. Your saved edits since applying are included. Publish all makes these drafts and the theme live together; you can undo from History.” First “Loading the latest draft changes…”, then one expandable row per changed page, plus **Store theme and branding**	The dialog stays on loading for a long time, or “The detailed change review is unavailable. Save pending edits and refresh. Publishing stays disabled until the review can be loaded.” (publishing is blocked until it loads). Retry once after saving; log if it persists
D2	Expand the Home page row and **Store theme and branding**	Each changed item shows **Live now** (what customers see) and **Draft to publish** (what will go live). An item with no value shows **Not set**. Each page also has a **Page styles** part	Both columns identical for a row listed as changed
D3	Before confirming, reload the live storefront	Still your original look	Already changed. Log as a severe bug
D4	Click **Publish all** in the dialog	The button reads **Publishing…**. The dialog closes. The draft banner disappears from the editor	Error text: “Publishing failed. Your drafts are unchanged; nothing went live.” (or the offline version) with a **Retry** button. Nothing may have gone live; reload the storefront to confirm

#	What you do	What you should see	If you see something else
D5	Hard-refresh the storefront at 1440	The new Fashion look is live **everywhere at once**: header, footer, colours, fonts, homepage	Part of the site still old and part new. Log as a severe bug (publish must be all-or-nothing)
D6	Check **every page type** in the table below, one by one, on the live storefront	Each page in the template's look. Pages a template does not include keep their old look	A page that the template includes still shows the old look
D7	Re-read the content kept: your edited heading, paragraph, uploaded image and menu	Still there, same order, same count	Lost or reordered. Log as a bug
D8	Open **History** in the top bar, **Store templates** tab	A row for **Atelier Fashion** with a status, **Applied:** and **Published:** , and **Undo store template live** enabled	No row, or no Published time. Log as a bug

Publish all pages dialog with Live now / Draft to publish rows

Editor after Publish all with the draft banner gone

Page types to open for D6 (page addresses are the storefront's own; reach each by the header, footer or a direct link):

Page type	How to reach it on the storefront	Included by
Homepage	`/`	All ten
Header and footer	Any page	All ten
Log in, Sign up, Forgot password, Email verification	`/login`, `/signup`, forgot-password link, the link in the verification email	All ten
About us, Contact us	Footer links	All ten
Not found	A made-up address such as `/no-such-page`	All ten
Maintenance, Cookie consent, Toaster messages	Consent: first visit; toaster: add to wishlist while signed out	All ten
Wishlist, Profile	Signed-in header menu	All ten
Order confirmation, Thank you, Order detail, Order tracking, Order listing	Place a test order, then **My orders**	All ten
Product list	A category page	All ten
Product page	Any product	All ten
Cart	`/cart`	All ten
Checkout	Checkout from the cart	All ten

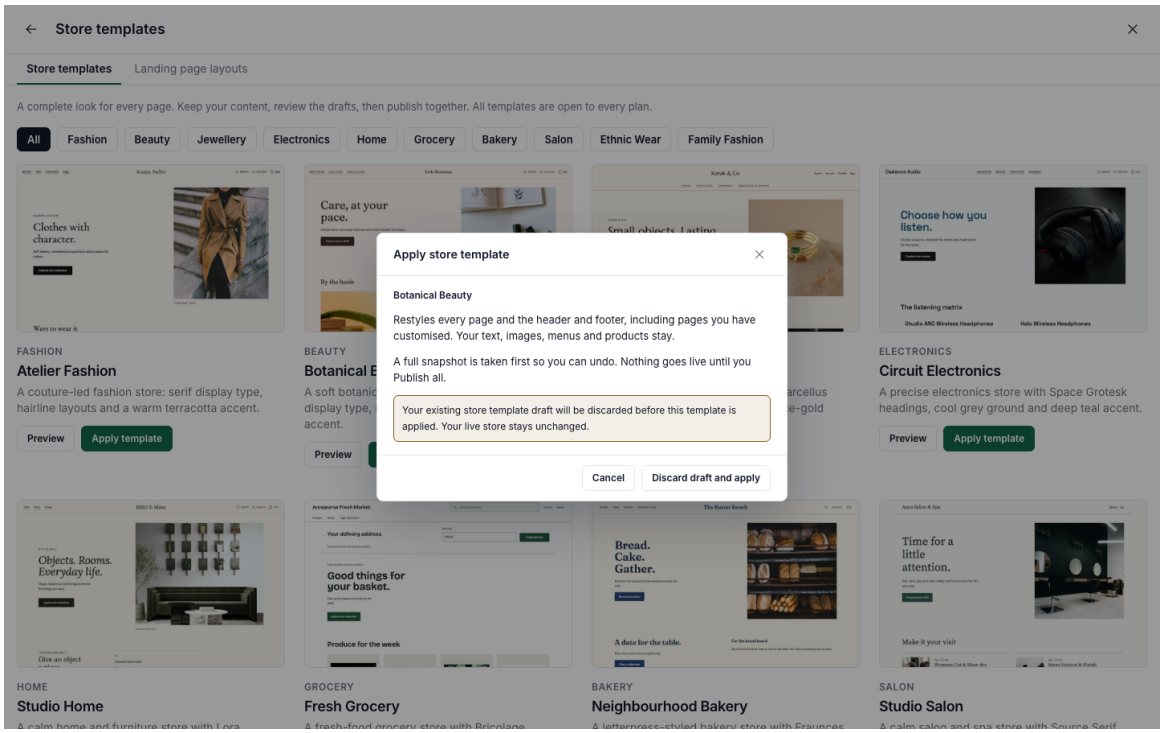

Not templated in any template: blog pages, search results, collection pages. Confirm they are unchanged.

Checklist E — Discard and Replace (apply over a draft)

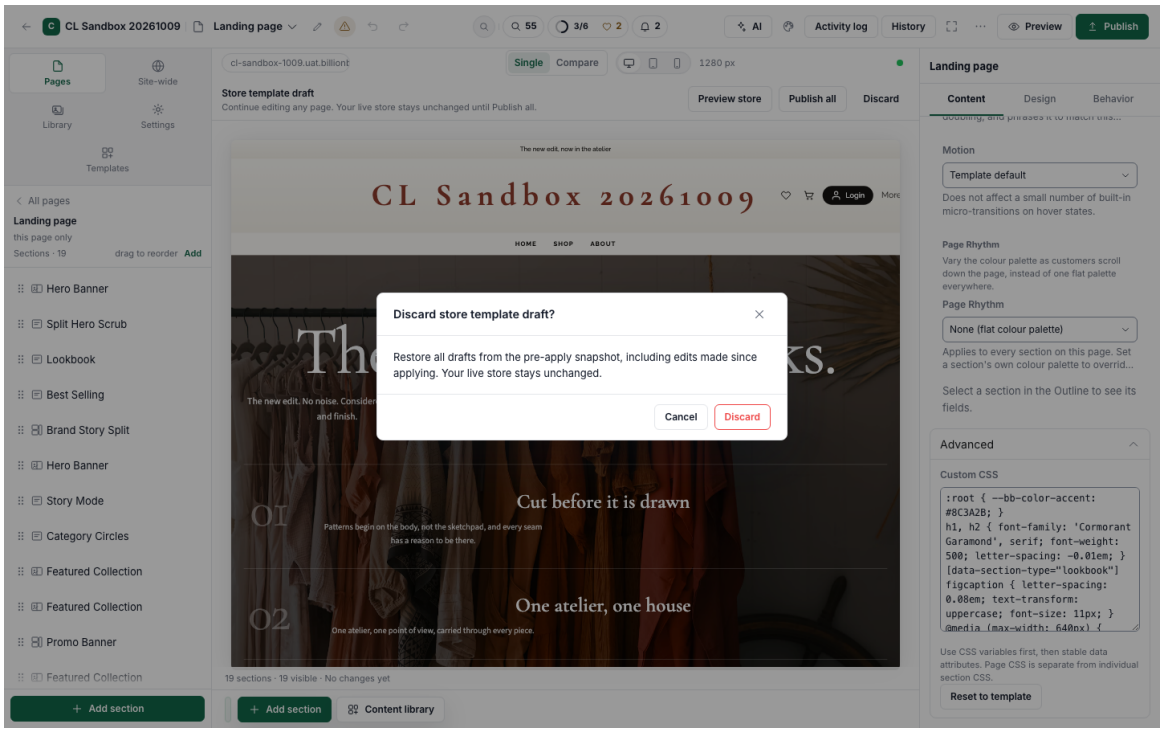

Run this after Checklist D, so Undo checks stay possible. If you are mid-way, first make sure no draft is pending.

#	What you do	What you should see	If you see something else
E1	Apply **Heirloom Jewellery** to drafts (it becomes the draft; Fashion stays live)	The draft banner appears. The live storefront is still Fashion	The live store changed. Log as a severe bug
E2	Click **Discard** on the banner	A dialog **Discard store template draft?**: “Restore all drafts from the pre-apply snapshot, including edits made since applying. Your live store stays unchanged.” Buttons **Cancel** and **Discard**	Different wording or no dialog
E3	Click **Cancel**	The dialog closes. The draft remains	The draft was removed. Log as a bug
E4	Edit a heading on a page in the draft, then click **Discard** and confirm **Discard**	The banner goes. The editor shows the pre-apply content again. The heading edit you made is lost (expected). The live storefront is unchanged	The live store changed, or the edit survives. Log as a bug
E5	Open **History**, **Store templates** tab	No new row for the discarded application is undoable. The Fashion row is still the published one	The Jewellery row offers **Undo store template live**. Log as a bug
E6	Apply **Heirloom Jewellery** to drafts again, then open the gallery and click **Apply template** on **Botanical Beauty**	The dialog **Apply store template** shows an extra warning: “Your existing store template draft will be discarded before this	The button still reads **Apply to drafts**. Log as a bug

#	What you do	What you should see	If you see something else
		template is applied. Your live store stays unchanged." and the confirm button reads **Discard draft and apply**	
E7	Click **Discard draft and apply**	Only **Botanical Beauty** is now the draft; the Jewellery draft is gone. Preview store shows Beauty	Both drafts exist, or Beauty sections stack on Jewellery sections. Log as a bug
E8	Edit one heading in the Beauty draft, then apply **Fresh Grocery** over it with **Discard draft and apply**	The Beauty draft and its edit are discarded; Grocery is the draft; live is still Fashion	The Beauty edit appears in the Grocery draft
E9	Discard the Grocery draft	No banner; live is Fashion	n/a

Dialog when a draft already exists: replace notice and Discard draft and apply button

Discard store template draft? confirmation

Checklist F — History and Undo

#	What you do	What you should see	If you see something else
F1	In the top bar click **History** (on a narrow window it still reads **History**; hover shows the tooltip **History**)	A dialog titled **Version history** with two tabs: **Page versions** (selected) and **Store templates**	A single mixed list of page versions and template rows, or the tabs are missing. Log as a bug
F2	Click the **Store templates** tab	The dialog title changes to **Store template history**. Text: “Review previous applications. Undo restores the full pre-apply snapshot to your live store, including pages, drafts, theme, branding and menus. Later edits are replaced. Sample products added by the template are removed unless you edited them or they have orders.”	The title stays **Version history**
F3	Read the row for Atelier Fashion	Template name and version (for example **Atelier Fashion · 1.0.0**), a status word, **Applied:** and **Published:** with a readable date and time such as “12 Oct 2026, 2:30 pm”	Raw machine dates like `2026-10-12T09:08:57.109Z`. Log as a bug
F4		Each tab keeps its own content. Page	Page-version Restore buttons appear on the templates tab

#	What you do	What you should see	If you see something else
	Switch back to **Page versions** and again to **Store templates**	versions shows the Restore buttons; the Store templates tab shows none of them	
F5	Count the rows. If there are more than a page of rows, click **Load more**	Older rows are added below; no duplicates	Duplicate rows. Log as a bug
F6	On a store with no history, or before any apply, open the **Store templates** tab	“No store template applications yet.”	Blank. Log as a bug
F7	On the Fashion row click **Undo store template live**	A confirmation **Restore your live store?**: “This immediately restores the full pre-apply snapshot to your LIVE store: published pages, page drafts, theme, branding and menus. Every edit made after applying this template is replaced. This is not a draft-only change.” and “Sample products from this template are deleted; samples you edited or that have orders are kept.” Buttons for cancel and **Restore live store**	The button is greyed out (Undo works only on the latest published application, with no draft pending, see F10)

#	What you do	What you should see	If you see something else
F8	Cancel, check the storefront still shows Fashion, then repeat F7 and click **Restore live store**	The button reads **Restoring…**, then closes	The dialog shows “The live store could not be restored. Your confirmation remains open; try again.” Retry once. If it repeats, log as a severe bug
F8a	After the restore completes, read the result message	“Undo removed N sample products and restored N.” (N may be 0). If any samples were kept: “Kept because you edited them or they are in use:” with a list	No message, or kept samples are deleted. Log as a bug
F9	Hard-refresh the storefront at 1440	The storefront is exactly as in your `before-*.png`: same look, same colours, fonts, menu, homepage text and section count	Any difference. Log as a severe bug with a side-by-side
F10	Open the **Store templates** tab again	The Fashion row now has a final status (**Undone**); its **Undo store template live** button is still shown but greyed out	Still enabled. Log as a bug
F11	**Undo is only for the latest.** Publish **Atelier Fashion** again, then publish **Studio Home** on top of it (apply, **Publish all**). Open the Store templates tab	Only the **Studio Home** row has **Undo store template live** enabled. The Fashion row’s button is disabled	Both enabled, or only Fashion enabled. Log as a bug

#	What you do	What you should see	If you see something else
F12	Apply **Neighbourhood Bakery** to drafts (do not publish) and look at the Home row	**Undo store template live** is disabled on every row while a draft is pending. After you discard the draft, the Home row is enabled again	Undo enabled while a draft is pending. Log as a severe bug
F13	Undo **Studio Home**. Then look at the Fashion row	Storefront returns to the pre-Home state (Fashion). The Fashion row **cannot** be undone any more (see Known open items). The original pre-template look can only be restored by hand or from the page restore point	Fashion row offers Undo and works. Report; the behaviour will have changed

Screenshot pending UAT capture — Store template history with an application row and Undo store template live

Screenshot pending UAT capture — Restore your live store? confirmation

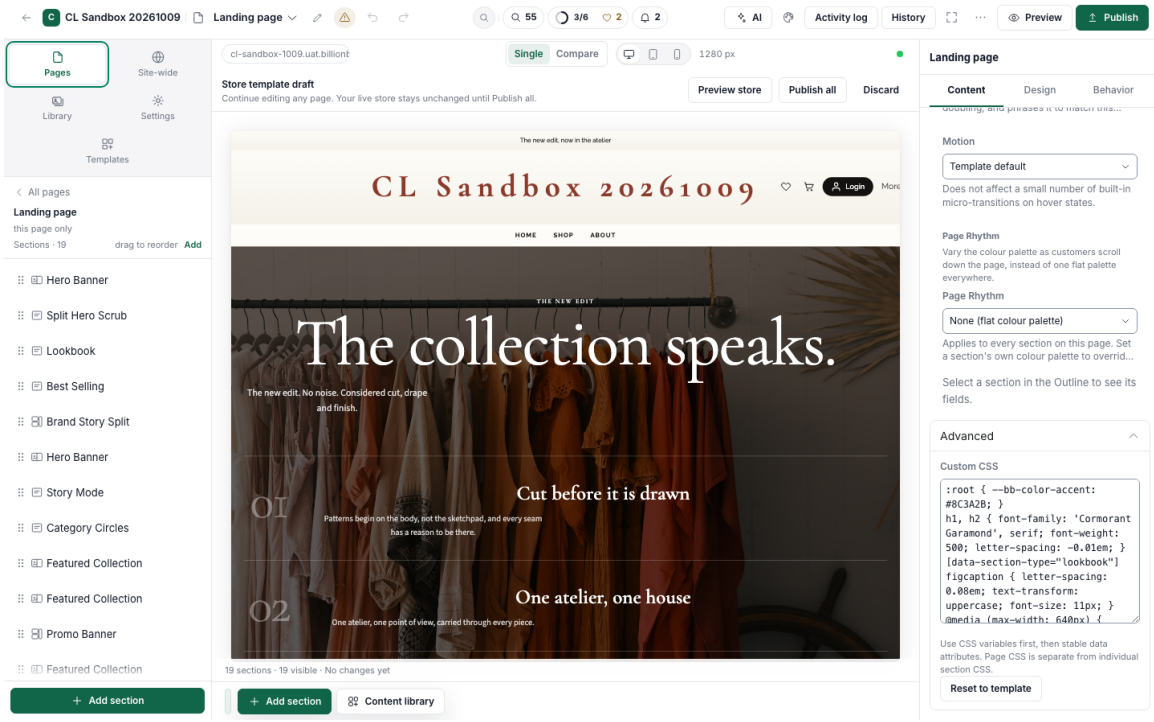

---

Checklist G — Custom CSS (Advanced)

Apply and publish any template first so a template CSS exists, then continue.

#	What you do	What you should see	If you see something else
G1	Open the Home page, open the page inspector and find the **Advanced** section	**Advanced** is open by default with a **Custom CSS** field and a **Reset to template** button. Help text: “Use CSS variables first, then stable data attributes. Page CSS is separate from individual section CSS.”	Section missing
G2	While the template CSS loads	Reset is disabled and the text reads “Loading template CSS…”	n/a
G3	Type `.test-x { color: red; }` into the field and save	Saved. No error	Cannot save. Log as a bug
G4	Type CSS that breaks the guidelines, for example a rule using a class name selector such as `.some-class div { color: red; }`	A notice: “These template CSS guidelines are advisory for your edits. Saving is still available.” with the specific issues listed. **Save still works**	Saving is blocked. Log as a bug
G5	Click **Reset to template**	The field is replaced with the applied template’s own CSS for this page	Your text remains, or the field is empty. Log as a bug
G6	Open a page for which the template has no CSS	**Reset to template** is disabled with “The applied template has no CSS for this page. Your CSS is kept.”	The field was cleared
G7			

#	What you do	What you should see	If you see something else
	Add CSS to the Home page only, publish, then open the About page on the storefront	The Home CSS affects Home only; About is unaffected	CSS leaks to another page. Log as a bug

Page inspector Advanced section with Custom CSS field and Reset to template

Checklist H — Roles and plans

#	What you do	What you should see	If you see something else
H1	Sign in as a **staff** user and open the Store Editor gallery	The user cannot use templates: the gallery shows “Store templates could not be loaded.” or no actions work, and no apply, publish, discard or undo succeeds (the server refuses staff)	Staff can apply or publish. Log as a severe bug
H2	As staff, open the editor top bar and **History**, **Store templates** tab	No application history is shown, or “History could not be loaded. Try again.”	Staff can undo. Log as a severe bug
H3	Sign back in as the owner and confirm the gallery works	Ten cards	n/a
H4	Compare the gallery, apply, publish and undo on stores of two different plans (a free-plan store and the MAX-plan sandbox), same steps	Identical behaviour: no card is locked, no upgrade-the-plan message, no plan limit message	A plan lock on any card. Log as a bug

Checklist I — Storefront visual check, per template

For each template: apply, **Publish all**, hard-refresh the storefront at 1440 and 390, compare against the description. After each, **Undo store template live** (or apply the next on top). Capture `after-<template>-1440.png` and `after-<template>-390.png`.

Every template should look finished, not generic: a clear hero, a defined palette, the named fonts, readable text on every background, no empty bands, no broken or missing images, no camera-icon placeholders, and your store name where the template names the shop.

Template	Hero	Palette	Fonts (heading / body)	Key homepage sections in order	Header and footer
Atelier Fashion	Full-width editorial hero “The collection speaks.”, button **VIEW THE COLLECTION**	Ivory ground (#FAF8F4), ink text (#141210), oxblood accent (#8C3A2B)	Cormorant Garamond / Inter	Hero, scroll-driven split hero “Each look. One cut.”, Lookbook “Resort 2025.”, brand story, “The show.”, customer photo wall “Styled by you.”, press logos “As worn in”, newsletter “Before the show.”	Centred logo with split navigation; divided-column footer
Heirloom Jewellery	Moving-text hero “Worn quietly. Felt deeply.”	Warm cream (#FAF5EC), dark brown (#2A1C14), antique-gold accent (#7A5A1E)	Marcellus / Jost	Hero, “The Collection.”, “Most loved this season.”, “Made by hand. Meant to last.”, “The Studio Promise”, newsletter “A private word.”	Serif luxury bar header; divided-column footer
Botanical Beauty	Frosted panel hero “Your Skin Deserves a Ritual” over a photo; announcement bar above it	Blush (#FBF3EF), terracotta (#8E4F43)	Fraunces / DM Sans	Announcement bar, hero, “Find Your Perfect Match”, “The Everyday Ritual”, “What’s Inside Matters”, “30-Day Results	Centred logo split navigation; inline newsletter footer

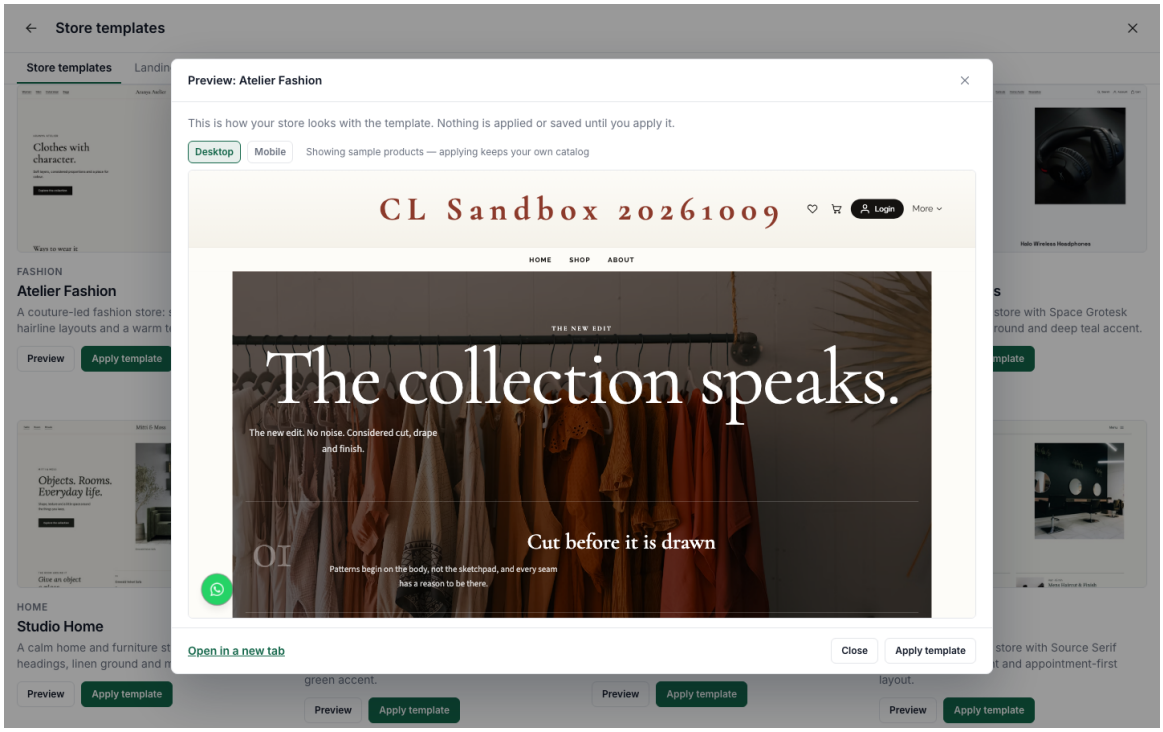

Template	Hero	Palette	Fonts (heading / body)	Key homepage sections in order	Header and footer
				Guarantee", FAQ, "Glow Up Your Inbox"	
Fresh Grocery	Split hero "Picked this morning, at your door by evening"; announcement bar "Free delivery on baskets above Rs. 499 ..."	White (#FFFFFF), deep green (#23583C)	Bricolage Grotesque / Source Sans 3	Announcement bar, hero, stats strip, "This week at the market", "A neighbourhood grocer, now delivering", reviews, FAQ, "The weekly harvest list"	Two-tier utility-bar header; divided-column footer
Studio Home	Hero "Objects worth living with."	Warm off-white (#F7F5EF), sage green (#3B5947)	Lora / Source Sans 3	Hero, featured product "The Stoneware Serving Bowl", testimonials carousel, "Trusted by Thousands", FAQ, "Notes from the studio."	Centred logo split navigation; divided-column footer
Neighbourhood Bakery	Split hero "Breads, cakes and pastries, baked in small batches."; announcement "Order cakes 48 hours ahead"	Cream (#FFFCF2), dark brown (#3A2A1E), warm-brown accent (#8F4A1E)	Fraunces / Lato	Announcement bar, hero, "The menu", "From the menu", "The weekly bake list"	Centred logo split navigation; minimal link footer

Template	Hero	Palette	Fonts (heading / body)	Key homepage sections in order	Header and footer
Circuit Electronics	Product showcase hero “Hear every layer.”	Cool grey (#F5F6F7), near-black (#16191D), steel-blue accent (#185A78)	Space Grotesk / IBM Plex Sans	Announcement bar, hero, “The range”, turntable story, featured headphones, “Built to be kept”, “Heard from listeners”, “Release notes and restocks”	Two-tier utility-bar header; minimal link footer
Studio Salon	Full-bleed photo hero “Hair, skin and spa, at an unhurried pace.” with a button to book an appointment	Soft grey-white (#F7F7F3), deep green-teal (#263B38 / #325D55)	Source Serif Pro / Manrope	Hero, “Senior stylists, a calm room.”, gallery “Hair, colour, nails, spa.”, “Take the ritual home”, “Request a booking.”	Centred logo split navigation; divided-column footer
Saanjh Ethnic Wear	Hero carousel opening on “THE FESTIVE EDIT”	Cream (#F6EEDF) ground, dark brown (#3B2417) text, copper-brown accent (#6B3A24)	Playfair Display / Inter	Hero carousel, “Shop by Collection” circles, Trending Collection, Best Selling, sale ticker, Clearance Sale, Salwar Suit, “What customers say”, “Follow us on Instagram” video spotlight,	Template header and footer. *Screenshot pending UAT capture; order of sections as seeded, confirm on the walk*

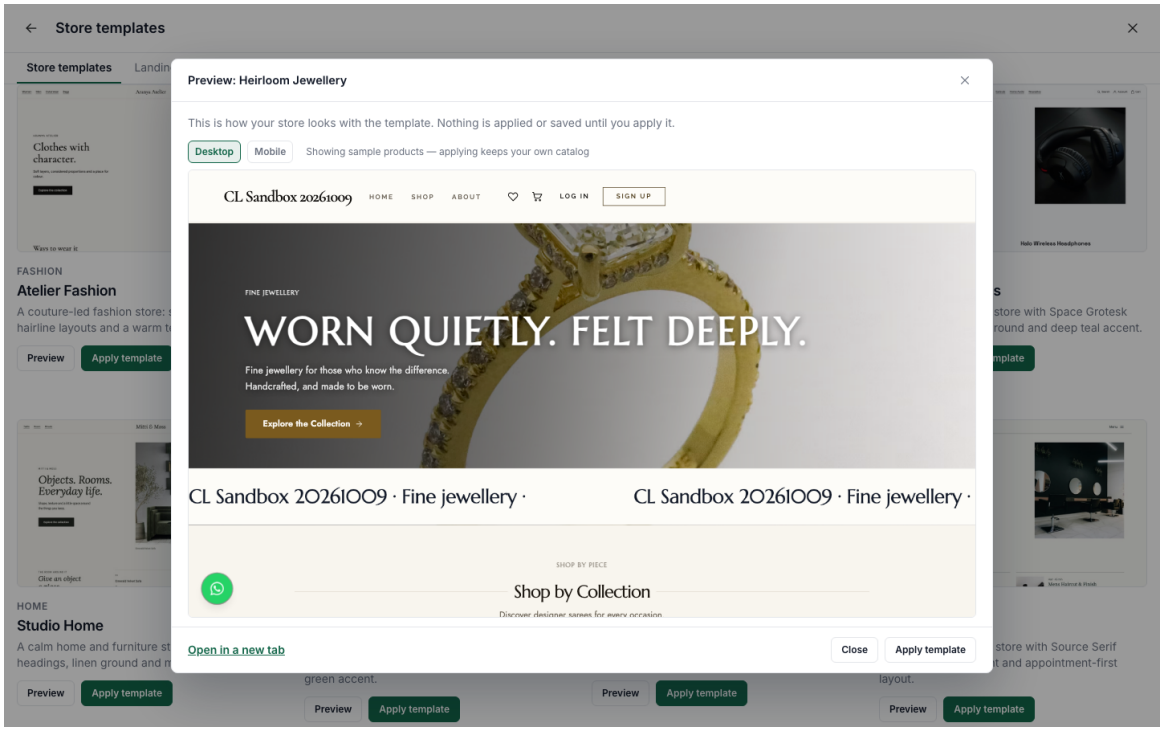

Template	Hero	Palette	Fonts (heading / body)	Key homepage sections in order	Header and footer
				“House Of Saanjh” slideshow	
Aadhya Family Fashion	Hero “Festive wear for the whole family” with live (selectable) headline text	White ground, near-black (#1C1C1C) text, green accent (#10b981)	DM Serif Display / Inter	Promise ticker, “Explore Our Collections”, “Our Signature Saree Collection”, Best Selling, Trending Now, why-shop-with-us block, testimonials, promo tiles, FAQ (Lookbook is switched off)	Template header and footer. *Screenshot pending UAT capture*

#	What you do	What you should see	If you see something else
I1	Per template: publish and view the homepage at 1440	The hero, palette, fonts and sections in the table above. Text is readable on every background; the logo is small and tidy (not oversized)	Different hero or order; unreadable text; oversized logo. Log template + screenshot
I2	Per template: scroll the full homepage	No empty bands taller than a few lines, no grey placeholders, no section repeated	Empty bands or repeated blocks. Log as a bug
I3	Per template: open login, about, contact, not found	The same palette and heading font as the homepage	One page with a different heading font or a stale default colour. Log as a bug
I4	Per template: open a product list and a product page (where included)	In the template's look, with your products	A generic look that ignores the template
I5	Per template: open the cart (empty), then with an item	In the template's look; the call-to-action button text is readable	Low-contrast button text. Log as a bug
I6	Per template: the cookie consent notice on a first visit	Does not hide the page content permanently; can be dismissed	Covers the hero with no way to dismiss
I8	For **Saanjh Ethnic Wear** and **Aadhya Family Fashion**: compare the homepage with the mock-up or the copied store as supplied by design	Same section order and palette	Different order or palette. Log as a bug with a side-by-side

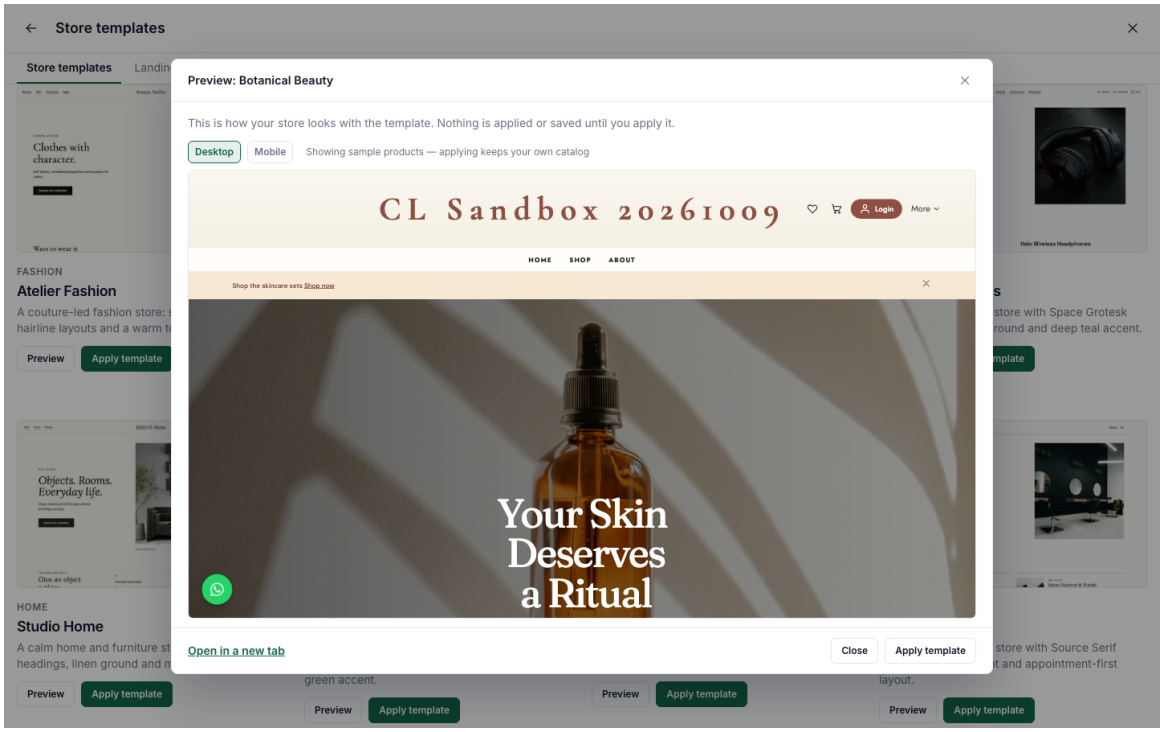

#	What you do	What you should see	If you see something else
I7	Compare the gallery thumbnails with the real result	The card matches its published look	n/a. Note differences for design review

Checklist J — Mobile (390) and the editor top bar

#	What you do	What you should see	If you see something else
J1	Publish a template. On the storefront at 390 pixels wide open the homepage	One column, no sideways scroll, no overlapping text or images, buttons large enough to tap	Horizontal scroll or overlap. Log as a bug
J2	At 390 open the menu, login, product page, cart	Each is usable; the header collapses to a menu	Menu unreachable. Log as a bug
J3	At 390 check the footer of a short page (about or 404)	The footer reaches the bottom of the screen with no mismatched colour band underneath	A pale band below the footer. Log as a bug
J4	In the editor with a draft banner showing, resize the admin window to 1024, 1280, 1536 and 1920 pixels wide	The editor top bar stays on **one row** at each width. Controls move into a menu or shorten (**History**) rather than wrapping	The top bar wraps to two rows. Log width and screenshot
J5	At 1024 wide, check that **Publish all**, **Discard** and **Preview store** on the banner are all reachable	All three visible and clickable	Hidden behind other controls

Checklist K — Preview window, sample products, chrome, undo and template 10

Run on the sandbox store with the Store Editor open at 1280 or wider. K1 to K8 use **Atelier Fashion** unless stated.

#	What you do	What you should see	If you see something else
K1	**Preview Desktop/ Mobile toggle.** Click **Preview** on a card. Note the two buttons **Desktop** and **Mobile**	**Desktop** is selected. The storefront inside the frame is laid out as a wide desktop page, shrunk to fit (no horizontal scroll bar inside the frame)	Mobile layout at Desktop, or the frame needs scrolling sideways. Log as a bug
K2	Click **Mobile**	The frame shows a phone-width page (390 wide) with the mobile menu icon in the header; clicking **Desktop** returns to the wide layout, and the page you were on is kept	The toggle does nothing, or the preview reloads to the home page every time. Log as a bug
K3	**Sample-products label.** In the preview window, read the line next to the toggle	“Showing sample products — applying keeps your own catalog”	Missing for a template that has sample products. Log as a bug
K4	**Sample products in the preview.** Browse to the product list	Template sample products (the count for that template is in Part 3 of the guide; Fashion has 12 in 4 categories), not your own. Your own products do not appear	Your own products appear, or the list is empty. Log as a bug
K5	**Sample PDP extras.** Open any sample product’s page in the preview and scroll the whole page	The page loads with no error banner and no endless spinner. Areas for reviews, questions, bundles, specifications, size chart and customer photos are empty or	An error message, a blank page, or a spinner that never ends. Log as a severe bug

#	What you do	What you should see	If you see something else
		absent (the samples carry no such data)	
K6	**Apply keeps the catalog.** Note your product count in Products. Apply the template to drafts (leave **Add sample products** off, or note its default: it is off when the store has products). **Publish all**	The product count is unchanged and no sample products appear on the live storefront	Your products were replaced or removed. Log as a severe bug
K7	**Apply keeps the template chrome.** After K6, open the live storefront header and footer	The header and footer look is the template's (layout, colours, fonts). Only your logo, store name and navigation links are yours	The header or footer still has your old styling, or your logo / menu links vanished. Log as a bug
K8	**Add sample products.** Discard, apply again, and switch **Add sample products** on. Apply to drafts, then **Publish all**	Samples appear on the live store only after **Publish all**; the dialog said they stay hidden until then. Your own products are all still present	Samples visible before Publish, or your products missing. Log as a bug
K9	**Undo.** In **History**, **Store templates** tab, click **Undo store template live** on the newest row and confirm	The result message "Undo removed N sample products and restored N." appears; the storefront returns to the old look and your products are still present	Samples remain although untouched, or products you added vanish. Log as a severe bug
K10	**Template #10.** Preview, apply and publish **Aadhya**	Preview title "Preview: Aadhya Family Fashion"; 22 sample	

#	What you do	What you should see	If you see something else
	Family Fashion. Compare with Part 3	products in 4 categories; green accent, white ground; hero “Festive wear for the whole family”	Wrong name, wrong count or wrong palette. Log as a bug
K11	**KSS search-close at 380px.** On the published storefront of a store showing a header with search (for example Aadhya Family Fashion), set the window to 380 wide. Open the menu, tap search, type a word, press Enter	The search panel and menu close and the results page shows; pressing Back does not leave the panel stuck open and the search box is empty	The panel stays covering the page. Log as a bug (under UAT verification today)
K12	**KSS empty-filter recovery at 380px.** Open a product list, apply colour and price filters until nothing matches	“No products found” with a removable chip for each active filter, **Clear filters**, **Back to previous results** (only after you changed filters) and an **All Products** button (may display as ALL PRODUCTS). **Clear filters** and **All Products** both clear every filter; **Back to previous results** returns to the last list that had results	No way back from the empty state. Log as a bug
K13	Open the product list with no filter that is truly empty (a category with no products)	“No products available in this category yet”, no **Clear filters** button	A **Clear filters** button with nothing to clear. Log as a bug

Negative and edge paths

#	What you do	What you should see	If you see something else
N1	**Failed hero image.** Block `images.unsplash.com` in the browser (developer tools, block request domain), publish a template with a photo hero (Fashion, Jewellery, Home, Salon), and open the storefront	The hero text is readable on the section's own background colour. No dark overlay, no camera icon, no broken-image symbol	Dark text on a dark overlay, or a camera icon on the live storefront. Log as a bug. (In the editor canvas a placeholder with a camera icon is expected)
N2	**Server refuses with 400.** Cannot be triggered by normal use; if you see it, note the code	"The template could not be applied because the request was rejected." plus the server's message and "If this keeps happening, contact support and quote the details above."	n/a
N3	**409, sections not supported.** Seen only when a template uses a section your store does not support	"This template cannot be applied because some of its sections are not supported by your store yet." with a list of the affected sections	n/a
N4	**409, store changed.** Open the editor in two tabs; in tab 2 apply a template; in tab 1 (still showing no draft) apply a different template	Tab 1: "Your store changed while you were applying this template. Reload the page and try again." Reload shows the draft from tab 2	Both apply. Log as a severe bug
N5	**409, upgrade needed.** Apply when the release	The same "changed" message appears	n/a

#	What you do	What you should see	If you see something else
	lacks support (B8) using a stale tab	and the gallery after reload shows the upgrade card	
N6	**404, template withdrawn.** Not testable without engineering withdrawing a template	“This template is no longer available. Close this dialog and refresh the gallery.”	n/a
N7	**Server error (5xx).** Engineering stops the service during an apply	“Something went wrong on our side. Nothing was changed. Please try again in a moment.” Nothing changed in the store	Half-applied store. Log as a severe bug
N8	**Large content (413).** On a store with a very large amount of saved page content, open **Publish all**	If the review is too large to show: the review fails to load, “The detailed change review is unavailable. Save pending edits and refresh. Publishing stays disabled until the review can be loaded.”	A silent hang
N9	**Offline during apply.** Switch the network off, then **Apply to drafts**	“We could not reach the server. Check your connection and try again.” Store unchanged	Spinner forever
N10	**Offline during publish.** Switch the network off, then **Publish all**	“We could not reach the server. Your drafts are unchanged; nothing went live. Check your	The storefront changed. Log as a severe bug

#	What you do	What you should see	If you see something else
		connection and try again." and **Retry**	
N11	**Applying twice.** Click **Apply template** and, while **Applying…** shows, press the confirm button again	One application only. History shows one row for the apply, and only one draft banner exists	Two history rows or two drafts. Log as a bug
N12	**Apply the same template twice in a row.** Publish Fashion, then apply Fashion again	Allowed. The draft has the same section count as the first apply (C10) and Publish all works	Duplicated sections
N13	**Session expiry mid-apply.** Open the apply dialog, then in another tab sign out. Click **Apply to drafts**	The apply fails (the dialog shows "The template could not be applied. Save any pending edits and try again." or you are sent to sign in). After signing back in, the store is unchanged and no half-draft exists	A draft created without being signed in. Log as a severe bug
N14	**Other browser tab, Publish.** Tab 1 and tab 2 both show the draft banner. Publish in tab 1; in tab 2 click **Publish all**	Tab 2 is refused with a failure message; nothing is published twice; History shows one Published row	Two published rows for the same application
N15	**Other browser tab, Discard.** Tab 1 and tab 2 show the banner. Discard in tab 1, then **Publish all** in tab 2	Tab 2 cannot publish (the draft is gone); the live store is unchanged	The discarded draft goes live. Log as a severe bug
N16	**Apply failed after replace.** With a draft pending, use **Discard**	The error shows. Note whether the earlier draft still	The live store changed

#	What you do	What you should see	If you see something else
	draft and apply while offline	exists. The old draft is discarded first, so after a failure there may be no draft at all, and the live store is unchanged	
N17	**Unsaved edits.** Type in a text field and, before saving, click **Apply template**	Your pending edits are saved first. If the save fails, the apply stops with a message to save your changes	The apply continues and the edit is lost

Known open items (cross-reference Part 11)

These were found in the most recent internal walk and are still being fixed. A row that fails because of one of these is **not** a new defect; mark it “known open” and do not count it as a pass.

- **Hero photo of the first section.** On some templates the first hero may not appear on the published homepage. Check I1 against the table and report which template.
- **Template fidelity.** Product-page and product-list typography and layout, and some inner pages, do not yet match the approved designs in every template (see Part 11 for the supported pages per template).
- **Publish review wording.** The **Store theme and branding** section can show technical values (raw settings and identifiers) rather than plain wording.
- **UAT walk of all ten templates.** The UAT walk of all ten templates plus the visual judge is in progress. Template 9 and 10 results are not final.
- **Search close on phones.** The fix (K11) is under UAT verification today.
- **Undo depth.** After Undo of the newest template, the older applications cannot be undone from the UI.
- **Editor canvas.** The editor canvas can show the store’s old header colour and placeholder products until the page is published; the storefront is the reference.
- **Plan badges.** Some layout cards inside the editor show an **Upgrade** badge for the sandbox owner.

- **Storefront-upgrade tooltip.** The hover text on the upgrade message shows a technical capability name.

What this checklist does NOT prove

- **Real merchants.** It does not prove how a live store with thousands of products or years of content behaves. Use only the sandbox.
- **Payments and orders.** It does not test paying for an order. Order pages are only checked for look.
- **Other browsers and devices.** One desktop browser and one 390-pixel width. Real phones and other browsers are not covered.
- **Languages.** Only English text is checked.
- **Performance.** Page speed and publish time under load are not measured.
- **Search, blog and collection pages.** Not part of any template.
- **Booking.** No template includes a booking page; the Salon template's button text is the only booking link.
- **The Landing page layouts tab.** It is a different feature (a single homepage layout) and is not covered here.
- **Staff export tooling.** Internal, not covered.
- **Production.** Everything here runs on UAT. A production release needs its own pass.

STATUS: COMPLETE

SOURCE EVIDENCE (internal — will be stripped before delivery)

Admin strings are the in-code English defaults (the storefront templates strings are not in `common.json`; they ship as `t(key, fallback)` fallbacks). Paths relative to `.worktrees-tpl/ap-hist/src/page/StoreEditor/` unless noted.

- Apply dialog title, lines, buttons, replace notice, all error messages and error classes (400/422 validation, 404, 409 unrepresentable/conflict, 5xx, network, generic; 413 and 401 fall to generic): `storeTemplates/StoreTemplateApplyDialog.tsx:21-38` (classification), `:68-98` (error copy), `:141-190` (title, buttons, lines), `:207` (support hint), `:216` (error code).

- Replace flow = discard current draft first, then apply; editor flushes first: `storeTemplates/StoreTemplatesContext.tsx:93-96` (`flushEditor` , “Save your page changes before continuing.”), `:137-149` (`apply` calls `storeTemplateApi.discard` then `apply`).
- Draft banner strings and preview unavailable: `storeTemplates/StoreTemplateDraftBanner.tsx:55-150` .
- Publish dialog: title, description, loading, error, Live now, Draft to publish, Not set, No changes, Page styles, Store theme and branding, failure copy, Retry: `storeTemplates/StoreTemplatePublishDialog.tsx:68-101,176-240,255-306` . Only pages with `changed` listed (`:268`).
- History strings, Applied/Published, Undo button rendered on every row and disabled unless server `undoable` (`StoreTemplateHistory.tsx:162-175`), formatted date (`:11-18` , Intl medium date + short time), status shown via `storeTemplates.history.status.<status>` falling back to the raw status word (`:140`), confirm dialog `:195-232` .
- Modal title per tab and tabs **Page versions** / **Store templates**; default tab Page versions on open: `composer/ComposerHistoryPanel.tsx:383-387,603-607,648-660,670` . Strings: `i18n/locales/en/common.json` (`storeEditor.history.*` at ~21043-21052; `editors.landingPage.history.title` = “Version history” at :3855; `storeEditor.topbar.island3.history` = “History”).
- Top bar History button and tooltip: `regions/TopBar.tsx:1209-1219` .
- Gallery strings, upgrade message, **Upgrade your storefront** link, tooltip of missing capabilities, preview error, Opening preview...: `gallery/StoreTemplateGallery.tsx:109-279` (upgrade `:216-240`). Link target `src/components/storefront/storefrontUpgradePath.ts:2` = `/online-store/storefront-upgrade` .
- Preview window: popup opened first, blocked popup or failed token mint both return false: `storeTemplates/openStorePreviewWindow.ts:11-25` ; preview marker query `_preview=draft` .
- First-run picker auto-open conditions (no draft, no earlier application from `history()` , not dismissed) and the dismissed key `v3_store_template_picker_dismissed` set on close when auto-opened; `gallery=true` removed on close: `gallery/StoreTemplatePickerHost.tsx:7,31-70` . **Skip for now** `common.json:20983` , tabs :20984-20986 (`LandingTemplateGallery.tsx:477,513`).
- Setup checklist label **Choose a store template**: `regions/TopBar.tsx:416` . Templates tile `common.json:20649` / `regions/ModuleRail.tsx:184` .
- Advanced panel strings: `storeTemplates/AdvancedCustomCssPanel.tsx:30-103` .
- Outline count label “{{count}} sections”: `common.json:21419-21420` (screen location not confirmed, see report).

- Server: staff refused on all merchant routes by `adminGuard`; only export is staff: `be-seed/ecom-core-service/src/modules/admin/routes/storeTemplate.routes.ts:8-9,53-76`.
- Server errors/codes: `storeTemplate.service.ts` (be-seed) `:81` 404; `:186` 409 RELEASE_INCOMPATIBLE at apply and at publish (`:342`); `:216` 413 review too large; `:301` 409 APPLICATION_PENDING; `:201` 409 state conflict; `:403` only latest published can be undone; `:406` no undo while a draft is pending.
- Store name token resolved from locked branding at apply, fallback to platform default: `storeTemplate.service.ts:110-118,310-312`; 39 `{{storeName}}` occurrences in `ecom-db-library/src/storeTemplates/seeds.json`.
- No stacking: prior template section ids swapped out rather than kept as merchant content: `storeTemplate.service.ts:141-147`; report `build/FIX_APPLY_STACKING.md`.
- Hero failed-image behaviour: `.worktrees-tpl/uilib-hero/packages/section-renderers/src/sections/hero/HeroBanner.tsx:1731,2525` (`showIcon={isEditor}`); report `build/FIX_HERO_R1.md`.
- Per-template palette, fonts, hero, sections, chrome: `ecom-db-library/src/storeTemplates/seeds.json` (read by script, values as listed).
- Defects in Known open items come from `build/FULLFLOW_LOCAL_R1.md` (walk in progress; D01, D05-D09, D11, D14, D29, D30 and the template-fidelity group) and `build/ROOTCAUSE_R1.md`; status of each fix not re-verified for this guide.

Part 11 — What Isn't Finished Yet

- All ten templates cover the product list, product page, cart and checkout (Part 3).
- No template includes a booking page.
- Blog, search and collection pages are not templated in any template. Category pages follow the product-list (PLP) look.
- A template may need a storefront upgrade before it can be applied to an older store.
- Undo works only on the latest published template application, and not while a draft is pending (other history rows show a greyed-out Undo button).
- Only admin users can apply; staff cannot.
- Template designs are still being refined; the set and contents may change.
- Screenshots for Saanjh Ethnic Wear and Aadhya Family Fashion are pending capture; the guide marks them.
- The phone search-close fix on the storefront header (search closes after Enter and after going back) is under UAT verification today.
- The empty-filter recovery on the product list ("No products found" with Clear filters, Back to previous results and All Products) is verified on UAT.
- PROD is not released. The product owner decides when the ten templates and these fixes go to production.
- On a sample product's page in the preview, reviews, questions, bundles, specifications, size chart and customer photos are empty (the samples have none), and checking delivery by pincode on a sample product is not supported in the preview.
- The admin sidebar path to the Store Editor (Online Store, then Landing Page Editor) is verified in source but its click-through is still to be confirmed in the UAT walk.
- **BE-4:** template export fails on template-applied stores (`STORE_TEMPLATE_EXPORT_ASSET_INVALID`). Platform authoring only; not merchant-facing.
- Applying an Identity after a template keeps the template marker. Pending decision.

Round 45 (2026-10-15). This list was written before the items reached UAT. The "Final state" list below supersedes the "pending" notes in it.

- **Publishing after a template (ST-BASECFG, ST-BASECFG-2):** before the fix, a header, footer or page change published after "Publish all" could fail to reach the live storefront on a store with a template applied. Now such a publish shows up, unpublishing really unpublishes, and applying an Identity updates the live look too. Pending UAT rewalk.

- **Template export, theme settings (ST-EXPORT-PINS):** exporting a store that had a template applied failed with “export invalid” because the export rejected theme settings the apply itself writes. The export now accepts them. Pending UAT rewalk. Platform authoring only; not merchant-facing.
- **Template export, custom CSS (ST-EXPORT-CSS):** the same export also failed when a template’s custom CSS had been applied. The export now carries that CSS in the template’s own CSS field. Pending UAT rewalk. Platform authoring only.
- **Sample product pages in the preview (ST-PDP-EXTRAS-404):** reviews, questions, bundles and customer-photo requests for sample products returned “not found” in the preview because the storefront did not send the preview token with those requests. They are now sent, so these areas load (empty, since the samples have none). Pending UAT rewalk.
- **Hero image preload (ST-LCP-KEY):** the storefront home page asked the browser to preload a template image using an unusable address, which produced a “not found” request on PROD. It no longer does; nothing on the page looks different. Pending UAT rewalk.
- **KSS storefront hotfix for PROD:** dropped. The KSS template and its fixes ship in the main release instead.
- **First save of a header on a template store (ST-BASECFG-3):** the first editor save and publish of the header used to drop the template’s header settings. Fixed and independently verified. An announcement text on a template that has no announcement row still does not show; that is waiting on a product-owner decision.

Final state (2026-10-16): everything in Round 45 and Round 46 is on UAT. The PROD release is being run by the release team now. Existing PROD stores do not change: template changes reach only stores that apply a template after the release.

- **Verified on UAT:**
  - Apply and Undo work for all six templates checked; after Undo the store matches its state before the apply.
  - Jewellery shows the text header with a “Bag (1)” count that survives a reload.
  - Product pages show exactly one pincode checker.
  - The phone header bars and store name are visible on fashion, beauty, home and electronics.
  - The bakery button “Explore the menu” is now a padded button (it had lost its padding in Round 46).

- **Visual judge scores on UAT (pass bar 7.5; final sign-off is the product owner's):**
  - Pass: Jewellery 8.0, Home 7.6, Electronics 7.6, Bakery 7.5.
  - Fashion 7.0 fails: the home hero heading, description and numbered rows sit on three different alignment lines at desktop width. This was already in the earlier screenshots, so it is not new in this release.
  - Beauty 6.4 fails on clean screenshots: the phone header cuts "More" to "Mor", the dark overlay hides the hero photo, the desktop headline falls below the fold, and some sample product images did not load. There are no earlier clean screenshots to compare against.
  - Fashion and Beauty polish is listed as follow-up work and is not part of this release.
- **Not checked on UAT:** the "delivers to your pincode" success message needs a store with a shipping provider, and no sandbox has one. Without a provider the checker shows "Could not check this pincode", which is the same as on PROD today.

Part 12 — When Things Don’t Look Right

Symptom	Likely reason and fix
Customers still see the old look	The template is still a draft. Click **Publish all** on the banner.
Preview button is greyed out	No storefront URL is configured for the store. Set it, then try again.
Preview window says “The preview could not be loaded.”	Click **Retry**. If it repeats, close and reopen; log a bug with the template name.
Preview store on the draft banner does nothing	Pop-ups blocked. Allow pop-ups for the admin site. (The gallery **Preview** opens inside the editor and is not affected.)
Preview shows products I never created	They are the template’s labelled sample products (“Showing sample products — applying keeps your own catalog”). Applying keeps your own catalog.
Sample products did not come with my template	**Add sample products** is off by default when the store already has products, and is unavailable when your plan has no free product slots. Switch it on in the apply dialog, or delete products / upgrade your plan.
Apply says “Your plan has no room for the sample products...”	Untick **Add sample products** and apply again, or upgrade your plan.
My menu did not change	Your own menu is kept unless you tick **Replace my menu with category menus** in the apply dialog.
Product list shows “No products found”	Filters match nothing. Use **Clear filters**, **Back to previous results** or **All Products** below the message.
Card says “Needs a storefront upgrade before applying.”	Your store’s storefront version is older than the template needs. The store must be upgraded before this template can be applied.
Apply says sections are not supported	The template uses sections your store does not support yet. Choose another template.

Symptom	Likely reason and fix
“Your store changed while you were applying...”	Someone edited at the same time. Reload and apply again.
Publish all is disabled	The change review could not load. Save pending edits and refresh.
My page looks unchanged after applying	The template does not include that page, or the page is not yet published.
Undo store template live is greyed out	It is enabled only on the latest published application, and not while a draft is pending. Discard or publish the draft first.
Gallery shows no templates	“No store templates have been added yet.” or a load error with retry. Try again.
My custom CSS vanished	**Reset to template** replaces the field with template CSS. Re-enter your CSS.
Picker no longer pops up	You clicked **Skip for now**. Use the **Templates** tile.
Preview store says unavailable	“Store preview is unavailable until a storefront URL is configured.” Set the storefront URL.

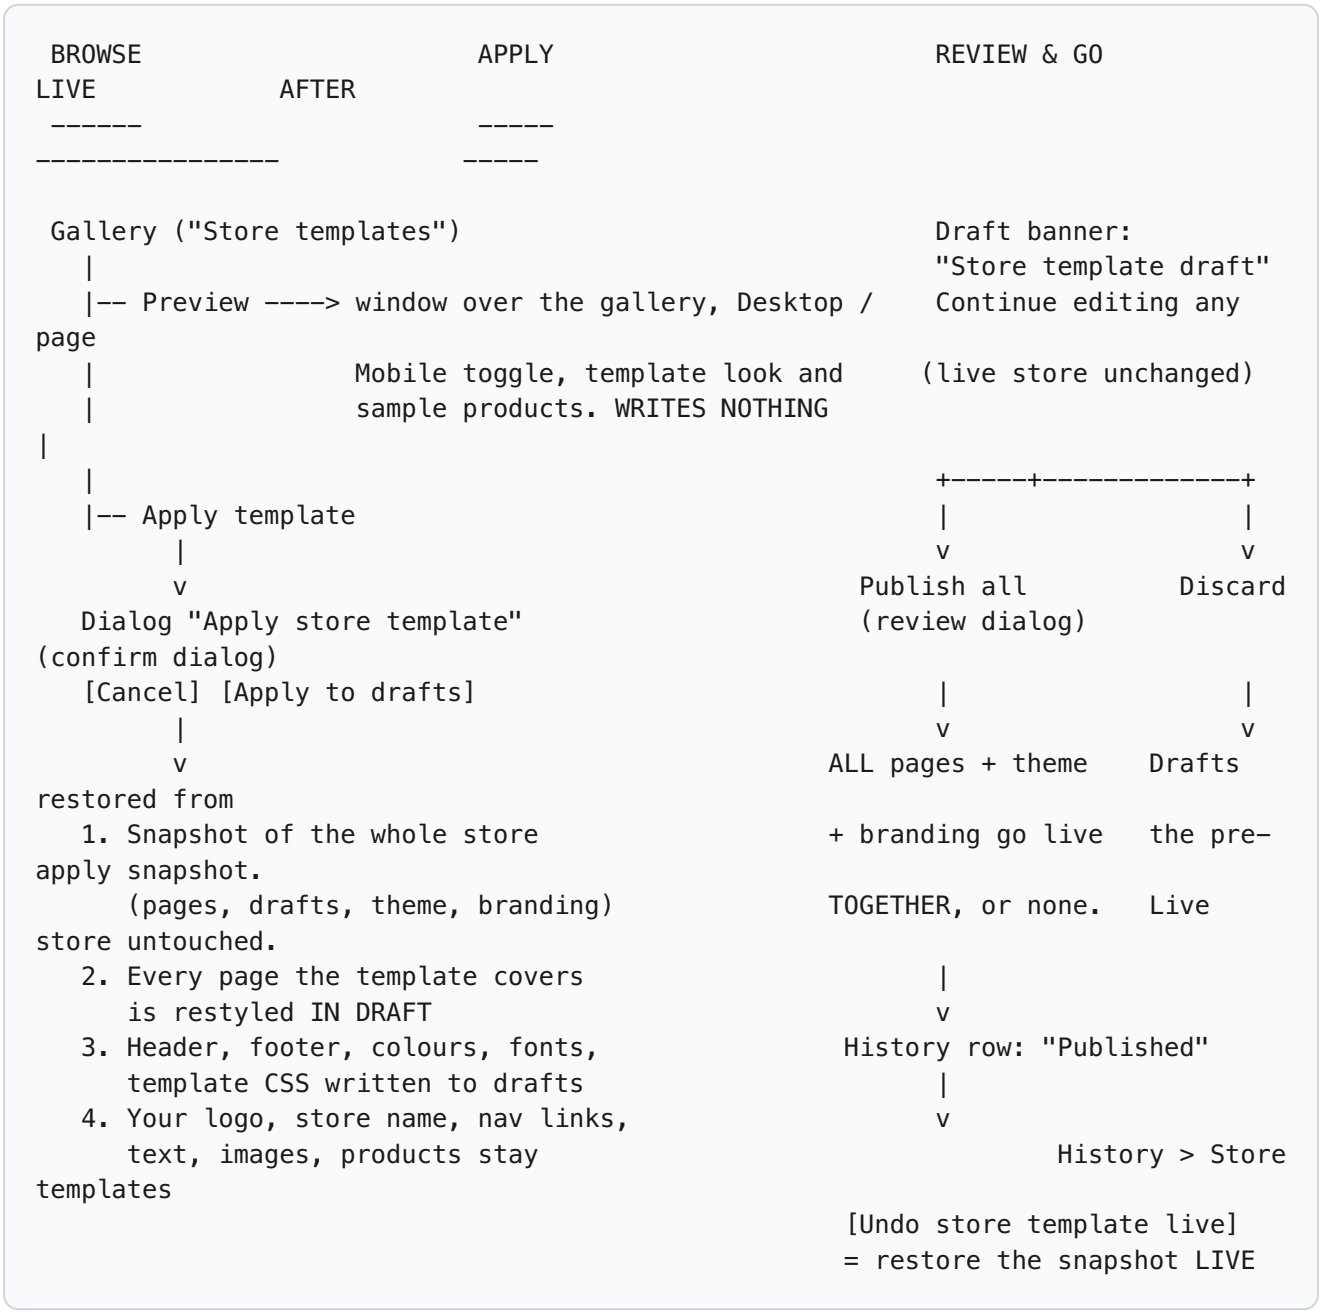

Part 13 — Quick Reference — Screen Index

Screen	Where	Key controls
Store templates gallery	Templates tile; Theme, Store templates tab	Preview, Apply template, industry buttons (picker)
Preview window	From a card's Preview	Desktop, Mobile, Open in a new tab, Close, Apply template, Retry
First-run picker	Opens in a new editor or with `?gallery=true`	Tabs Store templates / Landing page layouts, Skip for now, Back, Close
Apply store template	From a card	Apply to drafts, Discard draft and apply
Store template draft banner	Top of editor while a draft exists	Preview store, Publish all, Discard
Publish all pages	From the banner	Publish all
Discard store template draft?	From the banner	Discard, Cancel
Store template history	History button; Version history dialog, Store templates tab	Undo store template live, Load more
Restore your live store?	From history	Restore live store
Advanced (page inspector)	Page inspector	Custom CSS, Reset to template

Part 14 — The Feature in Diagrams

These diagrams show what happens behind each button, so a tester can tell which result is correct and which is a defect. Each diagram names the Part that covers it in detail. Read them top to bottom.

1. The whole life of a template

Where it is covered: Browse (Parts 2 and 4), Apply and the draft (Part 4), Publish all, Discard and Undo (Part 5), History (Part 6). The checklists are in Part 10, A to F.

Two rules that explain most test results:

- **Nothing goes live until Publish all.** Apply only writes drafts; the storefront does not change.
- **Publish all and Undo are all-or-nothing.** Either the whole store switches, or nothing does.

2. What Apply touches, and what it keeps

```
                  YOU APPLY A TEMPLATE
                          |
        +-----------------+--------------------+
        |                                      |
   REPLACED (restyled)                    KEPT (yours)
   -------------------                    ------------
   Page layout and section styling        Your headings, paragraphs
   Header and footer look (chrome)          Your uploaded images
   Colours (primary, secondary, accent)   Your logo, store name and nav links
   Heading and body fonts                 Your products, categories, orders
   Product, cart, checkout page styles    Your catalog (sample products only if
you add them)
   Template CSS (page CSS)                Pages the template does not include
   Identity and preset choices            Blog, search and collection pages
   Sections a PREVIOUS template added
   (swapped out, not piled up)
```

How to check: C6 to C11 and D7 in Part 10. If you apply template B over published template A, A's sections must disappear and your own must remain. The section count in the editor Outline must not grow with each apply.

3. Where the data lives (what each action changes)

```
 ACTION            PAGE DRAFTS   LIVE PAGES   THEME & BRANDING   HISTORY ROW
 ------            -----------   ----------   ----------------   -----------
 Preview           no            no           no                 no
 Apply to drafts   written       no           no (kept as is     created:
"drafted"
                                               until publish)
 Edit in draft     written       no           no                 -
 Discard           restored      no           no                 marked
"discarded"
 Publish all       -             written      written            marked
"published"
 Undo (latest)     restored      restored     restored           marked "undone"
```

Reading this: if the live storefront changes after anything other than **Publish all** or **Undo store template live**, that is a defect (Part 10, C4, C9, B4, E1).

4. The states of one application

The History tab shows these words. Today the status is printed as the plain stored word (drafted, published, discarded, undone, superseded) rather than as a friendly label (see Known open items).

Rules the History tab enforces:

Situation	Undo store template live
Latest published application, no draft pending	Enabled
An older published application	Disabled (superseded)
Any row while a draft is pending	Disabled
Drafted, discarded or already undone rows	Disabled

Only one draft can exist at a time. Applying a second template while a draft exists asks you to confirm **Discard draft and apply**: the old draft is thrown away first, then the new one is applied.

5. Why a card can say “Needs a storefront upgrade”

```
 Gallery opens
      |
      v
 Ask: what can this store's storefront release do?
      |
      +--> release supports Store Templates -----> card: [Preview] [Apply
template]
      |
      +--> release too old ----------------------> card: "Needs a storefront
upgrade
                                                         before applying."
                                                         + link "Upgrade your
storefront"
                                                         + Apply disabled
                                                         |
                                                         v
                                                  Storefront upgrade page
                                                  (/online-store/storefront-
upgrade)

 The same check runs again when you click Apply and again when you click Publish
all.
 A store that was fine at the start can be refused at the last step if its release
changes.
 Then the message is the "changed" or "not supported yet" one (Part 10, N3 to N5).
```

The check covers the whole store release, not the plan. All ten templates are open to every plan.

6. Which pages each template covers

All ten templates cover: Homepage, header and footer, log in, sign up, forgot password, email verification, about us, contact us, not found, maintenance, cookie consent, toaster messages, wishlist, profile, order confirmation, thank you, order detail, order tracking, order listing.

Pages that differ (today none do; all four shop pages are in all ten templates):

Template	Product list	Product page	Cart	Checkout
Atelier Fashion	Yes	Yes	Yes	Yes
Heirloom Jewellery	Yes	Yes	Yes	Yes
Botanical Beauty	Yes	Yes	Yes	Yes
Fresh Grocery	Yes	Yes	Yes	Yes
Studio Home	Yes	Yes	Yes	Yes
Neighbourhood Bakery	Yes	Yes	Yes	Yes
Circuit Electronics	Yes	Yes	Yes	Yes
Studio Salon	Yes	Yes	Yes	Yes
Saanjh Ethnic Wear	Yes	Yes	Yes	Yes
Aadhya Family Fashion	Yes	Yes	Yes	Yes

Earlier versions of this table showed some shop pages as “styled through the theme” for some templates; the current catalogue (seeds) carries a page row for the product list, product page, cart and checkout in every template. No template adds a booking page, a blog page, a search page or a collection page.

This table replaces the older page-coverage table in Part 3, which predates the current templates. If the two disagree, this table is right; ask a developer to confirm any cell you doubt.

7. Publish in detail

```
Click Publish all (banner)
      |
      v
"Publish all pages" dialog
      |  loads the latest draft changes ("Loading the latest draft changes…")
      |
      +-- cannot load --> "The detailed change review is unavailable. ..."
      |                   Publish all stays DISABLED until it loads
      |
      +-- loads --> one expandable row per CHANGED page
      |             each: Live now | Draft to publish | Not set | No changes
      |             each page also has "Page styles"
      |             last row: "Store theme and branding" (open)
      v
Click Publish all
      |
      +-- succeeds --> every page, theme and branding switch live together;
      |                banner disappears; other applications become "superseded"
      |
      +-- fails ----> "Publishing failed. Your drafts are unchanged; nothing went
live."
                     (or the offline wording) + Retry
```

8. What the storefront shows when a hero photo fails

```
Hero section has a photo
      |
      +-- photo loads -----> photo + dark overlay + text on it (as designed)
      |
      +-- photo fails -----> STOREFRONT: no overlay, no camera icon;
                                         text uses the theme's text colours on
                                         the section's own background (readable)
                            EDITOR:     a placeholder with a camera icon,
                                         so you can see an image is missing
```

Test it with N1 in Part 10. A camera icon on the live storefront is a defect.

Known open items

The diagrams show the intended behaviour. The following are still being fixed (see Part 11); a test that fails for one of these reasons is “known open”, not a new defect.

- Status words in History appear as plain stored words, and “who applied it” is not shown.

- Older applications cannot be undone after the newest one is undone.
- The published storefront for some templates can still differ from the approved design: some sections show as empty bands, the product list falls back to a generic look, and some inner pages use a different heading font.
- The Publish all review can show technical values for theme and identity rows and can list more pages than the template meaningfully changes.

STATUS: COMPLETE

SOURCE EVIDENCE (internal — will be stripped before delivery)

Paths relative to `.worktrees-tpl/`.

- Lifecycle, snapshot contents (rows, branding, landing flag), drafts written with merge, branding patch and template CSS, `{{storeName}}`, no-stacking swap: `be-seed/ecom-core-service/src/modules/admin/services/storeTemplate.service.ts` (apply ~`:290-420`, `mergedDraft` / `withStoreName` `:110-147`).
- Publish all atomic; other published apps become superseded; branding applied; feature flag `landing_template_enabled` enabled: same file (`publishAll`).
- Discard restores draft fields from snapshot: same file (`discard`). Undo only latest published, no pending draft: `:403,:406`; status set `drafted|published|discarded|undone|superseded`: `:45`. `undoable` computed in the history list.
- Compatibility check at gallery list, apply and publish: `assertCompatible` `:186` (409 RELEASE_INCOMPATIBLE, upgradePath `/storefront-upgrade`); capabilities `storefrontRelease.service.ts:160`.
- Page coverage table: derived from `ecom-db-library/src/storeTemplates/seeds.json` (pages list per template; PLP/PDP/cart/checkout skins in branding). Re-checked 2026-10-15 against the latest version of each template id (nine at 1.1.0, family-fashion-home-2026 at 1.0.0): all ten have 21 page rows including PLP, PDP, CART and CHECKOUT. The older cells in this section are superseded.
- Hero failed-image behaviour: `uilib-hero/packages/section-renderers/src/sections/hero/HeroBanner.tsx:1731,2525`.
- AP strings in dialogs: see Part 10 SOURCE EVIDENCE.
- Seeds-derived cells were read by script during the audit; the “styled through the theme” wording is an interpretation of branding-level page style ids with no page row, not a verified rendering result.

Glossary

- **Store template**: a complete industry look for the whole storefront.
- **Draft**: a saved but not live version of your pages and theme.
- **Publish all**: makes every draft page and the theme live together.
- **Discard**: throws away the draft and restores the pre-apply snapshot; live store unchanged.
- **Undo store template live**: restores the pre-apply snapshot onto the live store.
- **Sample products**: the curated products and categories a template ships so its preview and (optionally) your store look full. Hidden until Publish all; removed by Undo unless you edited them or they have orders.
- **Sample catalog**: the full set of sample products and categories one template carries (8 to 22 products).
- **Preview window**: the in-editor window opened by a card's Preview, with Desktop and Mobile buttons. Writes nothing.
- **Chrome**: the header and footer. A template's chrome look wins; your logo, store name and nav links are kept.
- **Snapshot**: a full copy of your store taken before applying.
- **Custom CSS**: optional per-page styling in the Advanced section.
- **Storefront upgrade**: moving a store to a newer storefront version so newer templates work.
